(BM-100) - Introduction to Biology For Pre-Engineering

Course Outline:

Theory:

1. **Cell Structure and Function**
 1. Techniques used in Cell Biology
 2. Cell Wall and Plasma Membrane – The Boundary Wall
 3. Cytoplasm and Organelles
 4. Prokaryotic and Eukaryotic Cells
2. **Biological Molecules**
 1. Biological Molecules in Protoplasm
 2. Importance of Water (Importance in Protoplasm and in Environment)
 3. Carbohydrates
 4. Proteins
 5. Lipids
 6. Nucleic Acids
 7. Conjugated Molecules (Glycolipids, Glycoproteins, Lipoproteins and Nucleoproteins)
3. **Enzymes**
 1. Structure of Enzymes
 2. Mechanism of Enzyme Action
 3. Factors affecting the Rate of Enzymatic Action (Temperature, pH, Enzyme Concentration and Substrate Concentration)
 4. Enzyme Inhibition (Competitive and Noncompetitive Inhibitors)
 5. Classification of Enzymes
4. **Bioenergetics**
 1. Aerobic and Anaerobic respiration
 2. Mechanism of Respiration
 3. Synthesis of ATP – Chemiosmosis and Substrate-level Phosphorylation
5. **Biodiversity**
 1. Acellular life
 2. Prokaryotes
 3. Diversity among animals
 4. Digestion
 5. Circulation
 6. Immunity
 7. Respiration
 8. Homeostasis
 9. Support and movement
 10. Nervous coordination

11. Chemical coordination
6. **Continuity in Life**
 1. Reproduction
 2. Development and aging
 3. Inheritance
 4. Chromosome and DNA
 5. Evolution
7. **Application of Biology**
 1. Gene Cloning (Recombinant DNA Technology and Polymerase Chain Reaction)
 2. DNA Sequencing
 3. DNA Analysis
 4. Genome Maps
 5. Tissue culture
 6. Transgenic bacteria, plants and animals
 7. Biotechnology and healthcare
 8. Scope and importance of biotechnology
 9. Vaccination and integrated disease management
 10. Animal husbandry
 11. Latest techniques applied to enhance crop and fruit yields
 12. Home gardening
 13. Role of microbes in human welfare

Suggested Teaching Methodology:

- Lecturing
- Written Assignments Report Writing

Suggested Assessment:

Theory (100%)

- Sessional (20%)
- Quiz (12%)
- Assignment (8%)
- Midterm (30%)
- Final Term (50%)

Recommended and Text Books:

1. AS/A level Biology, Mary Jones, Contributors: Richard Fosbery, Jennifer Gregory, Dennis Taylor
Edition 2, Cambridge University Press, 2007, ISBN 0521703069, 9780521703062
 2. National Curriculum 2006, HEC Pakistan
 3. AQA A-Level Biology, Pauline Lowrie, Mark Smith
-

(BM-101) - Introduction to Biomedical Engineering

Course Outline:

Theory:

- 1. Biomedical Engineering**
 1. What is biomedical engineering
 2. Branches of biomedical engineering
 3. Role of biomedical engineer
- 2. Devices used in Biomedical Engineering**
 1. Biomedical instrumentation fundamental
 2. Critical care devices used in biomedical engineering
 3. Radiological instrumentation.
 4. Diagnostic biomedical devices
 5. Therapeutic Biomedical devices
- 3. Applications of Biomedical Engineering**
 1. Rehabilitation Engineering
 2. Physiological modelling and simulation
 3. Biomedical signal processing
 4. Clinical Engineering
 5. Biomaterials
 6. Biomechanics
 7. Tissue Engineering and regenerative medicine
 8. Neural engineering
 9. Medical Image Processing

Suggested Teaching Methodology:

- Lecturing
- Written Assignments Guest Speaker
- Report Writing

Suggested Assessment:

Theory (100%)

- Sessional (20%)
- Quiz (12%)
- Assignment (8%)
- Midterm (30%)
- Final Term (50%)

Text and Reference books::

1. Introduction to Biomedical Engineering, 4th Edition, John Enderle
 2. Biomedical Engineering Handbook Volume I & II, J. D. Bronzino
-

(BM-108) - Computer Aided Engineering Drawing

Course Outline:

Theory:

1. Introduction

1. Introduction to Engineering Drawing
2. Use of drawing instruments and materials.
3. Basic Tools- classification and brief description
4. Lines, Types of lines, configuration of lines and their application, Selection of line thickness

2. Engineering Geometry

1. Geometric construction
2. Coordinate systems
3. Basic entities
4. Drawing simple geometric objects
5. Introduction to different types of scales.

3. Modelling Fundamentals

1. Introduction to solid modelling

4. Multiviews and Visualization

1. Projection theory
2. Projection of principal views from 3D models
3. Orthographic projections
4. Isometric drawings
5. Section views

5. Dimensioning and plotting

1. Dimensioning
2. Plotting and printing

Suggested Teaching Methodology:

- Lecturing
- Lab tasks
- Report Writing

Suggested Assessment:

Theory (100%)

- Sessional (20%)
- Quiz (12%)
- Assignment (8%)
- Midterm (30%)
- Final Term (50%)

Laboratory (100%)

- Labs
- Open-Ended Labs

Text and Reference Books:

1. A Textbook of Engineering Drawing: Along with an Introduction to AutoCAD (2015) by Roop Lal, Ramakant Rana
2. Mastering Autodesk Inventor 2015 and Autodesk Inventor LT 2015: Autodesk Official Press, Curtis Waguespack, ISBN: 978-1-118-86213-1

3. Engineering Drawing and Graphic Technology-International Edition, Thomas E. French, Charles J. Vierck, Robert J. Foster, McGraw-Hill, Inc.1993 ISBN 0-07-022347-5
 4. Engineering Drawing and Design-Sixth Edition, C. Jensen, J.D. Helsel, D.R. Short, McGraw-Hill, 2002, ISBN 0-07-821343-6 (T 353 J47 2002)
 5. Technical Drawing-Fourteenth Edition, F. E. Giesecke, A. Mitchell, H. C. Spencer, I.L. Hill, J.T. Dygdon, J.E., Novak, Prentice-Hall, Inc., 2012, ISBN 0-13-178446-3 (T 353 T43 2003)
-

(BM-113) - Engineering Mechanics

(BM-114) - Anatomy

Course Outline:

Theory:

- 1. Introduction**
 1. Anatomy and its branches
 2. Anatomical positions
 3. Planes
 4. Topography
- 2. Cell Anatomy**
 1. Overview of Cellular Anatomy.
- 3. Extremities (Upper and lower)**
 1. Bones
 2. Muscles
 3. Ligaments
 4. Tendons
 5. Bursae
 6. Reticulae
 7. Capsules
 8. Arteries
 9. Veins
 10. Lymphatic system
- 4. Vertebral Anatomy**
 1. Vertebrae
 2. Pelvic girdle
 3. Spinal cord
 4. Nervous system
- 5. Thorax-Thoracic Viscera**
 1. Surface anatomy
 2. Bones surface musculature
 3. Lungs
 4. Heart
- 6. Abdomen**
 1. Organs location
 2. Structures
 3. Relations and function
- 7. Head & Neck**
 1. Bones
 2. Muscles
 3. Cranial nerves

List of Practicals:

1. Demonstration of Human Skeleton in general.
2. Demonstration of basic structures in Human Anatomy (Skin, Muscles & Other Structures).
3. Demonstration of Anatomical planes & positions.
4. Demonstration of Movements & Motinal Terms.
5. Demonstration & Study of Scapula & Clavicle.
6. Demonstration & Study of Humerus bone.
7. Demonstration of Ulna and Radius.
8. Demonstration of wrist & hand bones.
9. Demonstration of Pelvic bone.
10. Study and demonstration of Femur bone.

11. Study and demonstration of Tibia & Fibula.
12. Demonstration of Foot bones.
13. Demonstration of skull.
14. Demonstration & study of different parts of Vertebral column.
15. Study and Demonstration of different Models.
16. Audio & Visual Demonstration of Human Anatomy.

Suggested Teaching Methodology:

- Lecturing
- Written Assignments Report Writing

Suggested Assessment:

Theory (100%)

- Sessional (20%)
- Quiz (12%)
- Assignment (8%)
- Midterm (30%)
- Final Term (50%)

Laboratory (100%)

-

(BM-115) - Physiology-I

Course Outline:

Theory:

1. Introduction

1. The Cell and General Physiology
2. Functional organization of human body and control of the internal environment
3. Cell and its function, protein synthesis and cell reproduction
4. Metabolism of carbohydrates and formation of ATP
5. Lipid and Protein Metabolism, transport through Cell membrane

2. Human physiology from a system's view point

1. Quantitative issues at the organ and whole body levels of Cardiovascular
2. Respiratory
3. Renal
4. Digestive systems

3. Nerve and Muscle

1. Membrane potential
2. Action potential
3. Excitation and Rhythmicity
4. Contraction of Skeletal and cardiac muscles, sliding filament Mechanism, Heart as a pump

4. Sensory Systems

1. Sensory Receptors
2. Classification and basic mechanism of action

5. Somatic Sensations

1. Mechanoreceptive sensations, pain, thermal and visceral pain, headache

6. Special Senses

1. Eye, receptor function of the retina, Neurophysiology of Vision, the Chemical Sense-taste and smell

List of Practicals:

1. Use of stethoscope & measurement of human arterial blood pressure & pulse
2. Determination of Red Blood Cells per cmm of human Blood
3. Determination of White Cells per cmm of human blood
4. Determination of haemoglobin percentage in human blood
5. Physiochemical & microscope analysis of human urine sample (Renal System)
6.
 1. Demonstration of the use of ECG,
 2. Test of hearing
7. Determination of visual acuity of a human subject by using snellen's eye chart
8. Determination of bleeding time in human body
9. Determination of the coagulation time in human body
10.
 1. To record normal respiration & effect of System exercise on it using spirometer.
 2. To record normal respiration & effect of exercise on it using power lab.
11. Introduction the organization & classification of neurons using neurolab
12. To demonstrate the differential count of leukocytes in human blood Sample
13. To observe the shape of RBC in normal saline stem

14. To identify various parts of digestive tract & to observe gut mobility in exposed abdomen of dissected rabbit
15. To determine the group of blood sample

Suggested Teaching Methodology:

- Lecturing
- Written Assignments Report Writing

Suggested Assessment:

Theory (100%)

- Sessional (20%)
- Quiz (12%)
- Assignment (8%)
- Midterm (30%)
- Final Term (50%)

Laboratory (100%)

 5. Arthur B. Ritter, Physiology for Engineers: A Systems Approach, 2017, ISBN: 9781498734561
-

(BM-116) - Physiology-II

Course Outline:

Theory:

1. Nervous System

1. Organization of Nervous System
2. Basic functions of synapses
3. Neuronal Mechanism and circuits for processing information

2. Motor Functions

1. Spinal cord and the cord reflexes
2. The cerebral cortex and intellectual functions of the Brain
3. Motor function of the Brain stem
4. Vestibular control of postural reflexes
5. Cerebrum and basal ganglia
6. Reticular

3. Somatic Sensations

1. Mechanoreceptive sensations
2. Pain
3. Thermal and visceral pain
4. Headache

4. Behavioral functions of the Brain

1. Limbic System
2. Role of the Hypothalamus
3. Control of the vegetative functions of the body
4. The Autonomic nervous system
5. The Adrenal Medulla
6. Electrical Activity from Brain

5. Endocrinology and Reproduction

1. Introduction to Endocrinology and the pituitary Hormones;
2. Hormonal functions in male and female

3. List of Practicals:

6. Study of kymograph
7. Recording of simple muscle twitch in Gastrocnemius sciatic nerve preparation
8. Recording of the effect of two successive stimuli on the nerve muscle preparation
9. Recording of the effect of continuous stimuli (fatigue) in a nerve muscle preparation
10. To demonstrate phenomenon of tetanisation
11. Effect of temperature on the simple muscle twitch
12. Demonstrate the superficial reflexes on a given subject
13. Demonstrate the deep reflexes on a given subject
14. To observe the receptor adaptation associated with Paccinian Corpuscle and other receptors in a computer simulated program
15. To illustrate the principle of phase locking in auditory fibers by using the computer simulated program

16. Determination of visual field in human subject.
17. Observe and study the spectrum and waveforms of different vowels sound and their relationship with the configuration of the vocal tract
18. Study the movement in basilar membrane during the passage of sound waves of different frequencies, on a simulated mode
19. (a) To calculate nerve conduction velocity from twitch records obtained by using a nerve-muscle preparation using Kymograph. (b) To calculate nerve conduction velocity from twitch records obtained by using a nerve-muscle preparation using powerlab. To locate the gustoreceptors in the human
20. (a) To calculate nerve conduction velocity from twitch records obtained by using a nerve-muscle preparation using Kymograph. (b) To calculate nerve conduction velocity from twitch records obtained by using a nerve-muscle preparation using powerlab. To locate the gustoreceptors in the human
21. Demonstration of the recording of an (extracellular) action potential from frog sciatic nerve (monophasic & biphasic) on oscillograph / oscilloscope
22. Study of reflex movements in spine of frog; Effect of acid treatment, Effect Effects of electric shock & Effect of Strychnine ### **Suggested Teaching Methodology:** Lecturing

Written Assignments Report Writing ### **Suggested Assessment: Theory (100%)**

Sessional (20%)

Quiz (12%)

Assignment (8%)

Midterm (30%)

Final Term (50%)

Laboratory (100%)

Text and Reference Books:

 2. Essential of Medical Physiology by Jaypee (6th Edition).
 3. William F, "Review of Medical Physiology".
-

(BM-203) - Cellular and Molecular Biology

Course Outline:

Theory:

1. Basic properties of cells
2. Prokaryotic and eukaryotic cells
3. Viruses
4. Biological molecules: carbohydrates, lipids, proteins, and nucleic acids, Techniques used in cell and molecular biology
5. Enzymes
6. Metabolism
7. Mitochondrion structure and function
8. Chloroplast structure and function
9. Plasma membrane composition, structure, and function
10. The movement of substances across cell membranes
11. The endomembrane system
12. The extracellular matrix
13. The structure and function of the nucleus
14. Genes and chromosomes
15. DNA replication
16. Transcription, Translation
17. Cytoskeleton and cell motility
18. Cellular reproduction
19. Cell signalling

Suggested Teaching Methodology:

- Lecturing
- Written Assignments Report Writing ## **Suggested Assessment: ### Theory (100%)**
- Sessional (20%)
- Quiz (12%)
- Assignment (8%)
- Midterm (30%)
- Final Term (50%)

Reference Text Book:

 2. Molecular Biology of the Cell (MBC) 5th Edition, 2008 Alberts, Johnson, Lewis, Raff, Roberts, Walter.
-

(BM-208) - Biomedical Electronics

Course Outline:

1. **Operational Amplifiers**
 1. Analysis of OP-AMP action
 2. OP-AMP specifications
 3. Interpreting OP-AMP data sheet
 4. Offset voltage and current
 5. Temperature rating
 6. Output swing
 7. Gain, CMRR
2. **Basic OP-AMP Configuration Circuits**
 1. Inverting amplifiers
 2. non-inverting amplifiers
 3. Voltage follower
 4. Summing amplifiers
 5. Integrator and differentiator
3. **Instrumentational Amplifier**
 1. Sensing and Measuring with the instrumentation amplifier
 2. Instrumentation amplifier as a signal conditioning circuit
4. **Active Filters Design**
 1. Basic Low Pass filters
 2. Introduction to Butterworth filters
 3. High pass and Bandpass Butterworth filters
 4. Notch filters
5. **A/D and D/A converters**
6. **Selected Applications of OP-AMPs in Biomedical Engineering**
7. **Signal Acquisition and Conditioning of ECG using OP-AMPs**

List of Practicals:

1. Design and Analyze OP-AMP Based Inverting Amplifier
2. Design and Analyze OP-AMP Based Non-Inverting Amplifier
3. Design and Analyze the characteristics of Summing Amplifier
4. To study Characteristics of Differential Amplifier
5. To determine common mode rejection ratio (CMMR)
6. Design and Analyze OP-AMP Based Integrator
7. Design and Analyze OP-AMP Based Differentiator
8. Design and Analyze Instrumentation Amplifier
9. Designing an ECG Amplifier.
10. To Analyze Analog to Digital Converter
11. To Analyze Digital to Analog Converter
12. Designing and analyzing frequency response of Active Low Pass Filter
13. Designing and analyzing frequency response of Active High Pass Filter
14. Designing and analyzing frequency response of Active Band Pass Filter
15. Designing and analyzing frequency response of Active Band Stop Filter/
16. Project : ECG/EMG/ EOG/PPG Amplifier and filters #### **Suggested Teaching Methodology:**
Lecturing

Written Assignments Report Writing #### **Suggested Assessment: Theory (100%)**

Sessional (20%)

Quiz (12%)

Assignment (8%)

Midterm (30%)

Final Term (50%)

Laboratory (100%)

Text and Reference Books:

1. Electronics Design by Floyd 9th Edition
 2. Operational amplifier and linear integrated circuits by Robert Coughlin
-

(BM-209) - Basic Electronics

Course Outline:

1. The RLC Circuits

1. Source Free Series & Parallel RLC Circuits,
2. over- damped, under-damped, critically damped RLC Circuits,
3. complete response of RLC Circuits, Lossless LC Circuits,
4. Power Factor Calculations

2. The Sinusoidal Steady Response

1. Nodal, Mesh & loop analysis, Comparison between Nodal and Mesh Analysis
2. AC source Transformation, Thevenin's, Norton's,
3. Reciprocity & Compensation theorems. Maximum Power Transfer Theorem.
4. First Order Circuits (RL and RC): Transient Response, Steady State Response, Unit Step Response

3. Complex Frequency

1. Introduction to complex frequency damped sinusoidal forcing function, $Z(s)$ & $Y(s)$, frequency response as a function of s , Complex frequency plane, natural response & the S-Plane.
2. Voltage ratio synthesizing, Scaling & Bode Diagrams.
3. General Two Port Networks: Introduction, admittance parameters, some equivalent networks, impedance parameters, hybrid parameters, transmission parameters. ##### **List of Practicals:**
4. To determine the voltage of series circuit
5. To determine the voltage of parallel circuit.
6. To determine the current through mesh analysis
7. To determine the voltage across nodes through nodal analysis of the circuit
8. To determine the voltage across nodes through nodal analysis of the circuit
9. To determine the voltage across Resistor in the circuit.
10. To study the filter circuit and response
11. To study the response of an RC circuit when applied with a sudden dc voltage source.
12. To study the response of a Driven RC circuit when applied with a sudden dc voltage source.
13. To Study the response of Parallel Resonant Circuit
14. To study the response of Series Resonant Circuit
15. To study source free RLC circuit and determine its response mathematically and graphically
16. To determine the transient analysis and plot transient analysis of RL circuit using PSpice
17. To determine the transient analysis and plot transient analysis of RLC circuit using PSpice.
18. Determine Natural Response of an RLC circuit.
19. To study source free RL circuit and determine its response mathematically and graphically ###

Suggested Teaching Methodology: Lecturing

Written Assignments Report Writing ### **Suggested Assessment: Theory (100%)**

Sessional (20%)

Quiz (12%)

Assignment (8%)

Midterm (30%)

Text book & Reference Books:

1. Engineering Circuit Analysis by William Hayt, 7th Edition, 2006. ISBN: 978- 0073263182
2. Fundamentals of Electric Circuits by Charles K.Alexander, Matthew N. O. Sadiku. 4th Edition, 2008.ISBN 978-0077263195

Basic Electronics

Course Outline:

1. Semiconductor Theory

1. Introduction,
2. Intrinsic and Extrinsic Semiconductors,
3. Doping and energy levels.

2. Diodes

1. PN junction/ Biased PN junction,
2. V-I Characteristics,
3. Load Line and dynamic resistance.
4. Diode models, Reverse recovery time and temperature effects,

3. Diode Applications

1. Half wave and Full wave rectifiers,
2. Clippers and Clampers, Logic gates.

4. Bipolar Junction Transistors

1. Construction, operation and characteristics,
2. Amplifying action and variation in current gain,
3. Common Emitter, Common Collector and Common Base Configurations. Power Ratings.

5. BJT Biasing Circuits

1. Fixed Bias, Voltage Divider Bias and Emitter feedback Bias Circuits,
2. DC load line and operating point,
3. Biasing circuit design and stabilization, Transistor as a switch

6. BJT Small Signal Analysis

1. Common Emitter Amplifier, Common Base Amplifier, Common Collector Amplifier, Amplifier Design and Loading effects,

7. Field Effect Transistors

1. JFET Construction and Operation,
2. Transfer characteristics and parameters,
3. FET Biasing Circuits, Fixed Bias,
4. Self-Bias and Voltage divider Bias

8. Design of a bias circuit

1. FET Small Signal Analysis,
2. JFET/Depletion MOSFET small-signal model,
3. Common source, common drain and common gate amplifiers,
4. Loading effects and design of amplifier circuits.

9. Differential Amplifiers

1. Darlington transistor circuit, properties of differential amplifier stage,
2. Circuits of differential amplifiers using BJTs and FETs.

10. Oscillators:

1. Hartley oscillators,
2. Colpitt oscillators,
3. RC phase shift oscillators,
4. Wein-Bridge oscillators,

5. Crystal oscillators based on BJT and FET. ##### **List of Practicals:** 1 To observe the working of diode with forward and reverse bias.
11. Plot the diode characteristic curve.
12. Calculate the bulk resistance of the diode and observe its effect in the diode approximations.
13. To observe the working of half wave rectifier.
14. To observe the working of full wave rectifier
15. To observe the working of Bridge wave rectifier.
16. To observe the working of Zener Diode PAGE 63
17. To analyze the working of Clamper Circuit.
18. To analyze the wrking of Clipper Circuit.
19. To determine the output voltage for half wave voltage doubler.
20. To determine the output voltage for full wave voltage doubler.
21. To determine the output voltage for Zener limiting circuit
22. Checking and Troubleshooting the NPN and PNP Transistor using Multimeter.
23. To use the transistor in switching mode.
24. Demonstrate the operation and determine the biasing parameter of Base Bias Circuit.
25. Demonstrate the operation and determine the biasing parameter of Voltage Divider Bias Circuit. ###

Text Book:

1. Electronic Devices and Circuit Theory By H. Boylestad and L. Nashelsky
 2. Electronic Devices and Circuits By Theodore F. Bogart, Jr.
-

(BM-210) - Biochemistry

Course Outline:

1. Introduction to Biochemistry

1. Colloidal state, buffer, pH, significance of pH Henderson equation, surface tension, viscosity, osmosis, diffusion, Biological Membrane, active Transport, Chemo-osmotic theory-passive transport concept of chromatographic techniques (TLC, paper chromatography, GLC column chromatography etc.) carbohydrates, amino acids, nucleic acids, proteins, vitamins, enzymes, hormones & signaling agents.

2. Metabolism of Carbohydrates, Lipids and Proteins

1. Carbohydrate Amino acids: structure, and properties. Proteins: primary and secondary structure of proteins. *Enzymes*: Nomenclature, properties, Working, Factors affecting Reaction, Equation and diseases Globular proteins: heme-proteins, hormones & signaling agents.

3. Conformational analysis and forces

1. Conformational analysis and forces that determine protein and nucleic acid structure. Molecular Modeling of protein, nucleic Tertiary and quaternary structure of protein, protein mis- folding.

4. Carbohydrates

1. Introduction, classification and structure. Digestion of carbohydrates. Metabolism of carbohydrates: glycolysis, regulation of metabolism, Overview and reactions of glycolysis, hormonal regulation of glycolysis, Tricarboxylic acid cycle, reactions of TCA, energy and regulation of TCA cycle.

5. Bioenergetics

1. *Bioenergetics*: Thermodynamic principles in human body. Thermodynamics of phosphate compounds (phosphate transfer reactions) and role of ATP for biological energy transfer, thermodynamics of life

6. Metabolism of Lipids

1. Digestion, absorption and secretion. Utilization of dietary lipids

7. Vitamins

1. folic acid, Vitamin B12, Vitamin C, Vitamin D, Vitamin B1, Vitamin A, Vitamin E. #####

List of Practicals:

8. How to prepare the Solution in Lab
9. Determination of pH by pH meter and Litmus paper
10. Demonstration the action of buffer
11. To determine the principle application of Henderson- Hasselbalch's equation
12. Tests for proteins
13. Examination of Egg white
14. Color reactions for proteins
15. Isolation of Casein from milk
16. Tests on carbohydrates
17. Measurement of Blood Glucose level with help of spectrophotometer
18. Oral Glucose Tolerance Test (OGTT)
19. Tests of Lipid profile by chemical analyzer
20. Separation of Amino Acids by chromatographic methods.
21. Open ended lab I
22. Open ended lab II
23. Open ended lab III ### **Suggested Teaching Methodology:** Lecturing

Written Assignments Report Writing ### **Suggested Assessment: Theory (100%)**

Sessional (20%)

Quiz (12%)

Assignment (8%)

-

(BM-306) - Bio-Instrumentation and Measurements - I

| | | | |

Course Outline:

1. Introduction to measurements

1. Precision
2. Resolution
3. Sensitivity
4. Accuracy
5. Uncertainty

2. Bio-potentials, biosensors and transducers

1. Biomedical signals of the human body,
2. Sensors and transducers for bio-potential measurements
3. Problems encountered in measuring biopotentials of the human body
4. Invasive and noninvasive measurement techniques and related equipment.
5. Functional Building blocks of a Biomedical Instrumentation System

3. Cardiovascular System Devices

1. Diagnostic: Electrocardiography, Measurement of Blood pressure,

Blood flow

1. Therapeutic: Cardiac output. Defibrillator, pacemaker

2. Pulmonary System Devices

1. Diagnostic: Pulmonary Function Analyzer, Spirometry, Ventilation Monitors, Respiration: Pulse oximetry, Capnography,
2. Therapeutic: Ventilators, Heart lung machine, nebulizer

3. Musculoskeletal & Nervous System Devices

1. EMG
2. EEG

4. Critical Care Devices

1. Patient Monitoring: Patient Monitors, central monitoring system, telemetry system
2. Surgical/Operation Theatre Devices Equipment: Electrosurgical unit

5. Genito-urinary System Devices

1. Hemodialysis Machine

6. Quality Assurance and Quality Control

1. Common defects in medical equipment
2. Performance measurement
3. Calibration
4. Maintenance and repair #####

List of Practicals:

7. To study the principle of various Biomedical Transducer
8. To understand methods and instruments for body temperature measurement and compare temperature sensor for selection on the basis of their properties
9. To study the working of photo detectors/photo sensors and their application in biomedical
10. To study the techniques of measuring blood pressure and measure the systolic and diastolic pressure.
11. To become familiar with the electrocardiograph as a primary tool for evaluating electrical events within the heart and observe rate and rhythm changes in the ECG associated with body position and breathing.
12. To record maximum clench strength for right and left hands and correlate motor unit recruitment with increase skeletal force.
13. To record EMG response to increased weights lifted by dominant and non-dominant arms and to record EMG when fatigue is induced.
14. To observe respiratory cycle and record breath per minute and respiratory rate in different conditions eupnoea, hyperventilation and apnea Vera.

15. To record an EEG from an awake, resting subject with eyes open and eyes closed. Identify and examine alpha, beta, delta, and theta components of the EEG complex.
16. To record EOG on the horizontal plane and compare eye movements under the following conditions: pendulum tracking & pendulum simulation.
17. To observe respiratory cycle and record breath per minute and respiratory rate in different conditions eupnea, hyperventilation and apnea Vera.
18. To observe real time monitoring through multipara monitor/bedside monitor.
19. To Study the construction and working of x-ray equipment and to practice the safety aspect using standard procedure.
20. To practice the safety aspect of ultrasound machine using standard procedure
21. To observe the principle and working of ventilator.
22. Open ended lab 1 ### **Suggested Teaching Methodology:** Lecturing

(BM-307) - Bioinformatics

Course Outline:

1. History and evolution of bioinformatics

1. Introduction to databases (Database types, Database formats, DNA databases, European Molecular Biology Laboratory (EMBL))
2. Genomics
3. Transcriptomics
4. Computational proteomics

2. Pairwise Sequence Alignment

1. Evolutionary Basis
2. Sequence Homology versus Sequence Similarity
3. Sequence Similarity versus Sequence Identity

3. Database Similarity Searching

1. Unique Requirements of Database Searching
2. Heuristic Database Searching
3. Basic Local Alignment Search Tool (BLAST)
4. FASTA
5. Comparison of FASTA and BLAST

4. GenBank and DNA Data base of Japan (DDBJ)

1. Protein information Resource (PIR) formats
2. Protein Sequence (databases, SwissProt, UniProt, UniProtKB/TrEMBL)
3. Structural databases (Protein Databank (PDB), Structural Classification of Proteins (SCOP) database, Class, Architecture, Topology, Homology (CATH) database) ### **Suggested Teaching Methodology:** Lecturing

Wiley, 2009, ISBN 0470085851, 9780470085851.

DNA Computing

Course Outline:

1. Introduction to Biomolecules

1. Computational Biology : Introduction to Bioinformatics
2. Protein folding and misfolding
3. Protein Architecture: Sequence of amino acids
4. protein interaction.

2. Structures

1. Secondary structure of proteins
2. Tertiary structure of proteins
3. Nucleic Acid Structure.

3. DNAs and RNAs

1. Interactions and conformations of DNAs.

2. Interactions and conformations of RNA.
4. **Computer Simulations of biomolecules**
 1. Classical versus quantum descriptions
 2. Statistical mechanics of biomolecules (e.g., canonical ensemble, ergodicity)
 3. Modeling interaction in protein (Bond-length and bond-angle potentials)
 4. Molecular Dynamics Simulations
5. **Numerical integration of Newton equations of motion**
 1. Algorithms ### **Suggested Teaching Methodology:** Lecturing

(BM-310) - Control Systems for Biomedical Engineers

Course Outline:

1. **Introduction**
 1. Introduction to control systems
 2. Open loop and close loop control systems.
 3. Examples of control systems in Biomedical Engineering.
2. **Modeling in the Frequency Domain**
 1. Electrical/Electronic/Mechanical systems transfer function
 2. Electric circuits analog
3. **Modeling in the Time Domain**
 1. General State-Space Representation and Analysis
 2. Converting a Transfer Function to State Space & vice versa.
4. **Time Response**
 1. Poles, Zeros, and System Response
 2. Transient and steady state response of first and second order systems
5. **Reduction of Multiple Subsystems**
 1. Block Diagrams and reduction techniques
 2. Signal-Flow Graphs and Mason's Rule.
6. **Control System Stability**
 1. Routh-Hurwitz Criterion and Special Cases
7. **Root Locus Techniques**
 1. Root Locus and its Properties
 2. Sketching the Root Locus plots.
8. **Frequency Response Techniques**
 1. Bode and Polar Plots
 2. Stability via the Nyquist Diagram
 3. Gain Margin and Phase Margin #####
9. To be familiar with the Matlab programming and control system toolbox.
10. Find the closed-loop transfer function of the system.
11. To find the impulse and step responses of the control system.
12. To compute the transient response parameters of control systems.
13. To find the partial fraction residues and poles of the system.
14. To find the Eigen values of the system.
15. Transfer function to state space conversion.
16. To find the closed-loop pole locations to check the stability of the system.
17. To obtain the root locus of the system.
18. To obtain the Bode plot of the system.
19. To plot the Nyquist diagram of the system.
20. To find the gain and phase margins of the system
21. Open ended lab 1
22. Open ended lab 2
23. Open ended lab 3
24. Open ended lab 4

-

(BM-311) - Bio-Instrumentation and Measurements - II

Course Outline:

1. **Centrifugation techniques**
2. **Electrochemical methods of analysis**
 1. Electrophoresis
 2. Blood banking and transfusion
 3. Chromatography, Liquid chromatography
 4. Gas chromatography
 5. High performance liquid chromatography
 6. Clinical chemistry analyser
 7. Automated cell counter
3. **Spectroscopy**
 1. Spectrophotometry
 2. Flame photometry
 3. Mass spectrometry
 4. Infrared spectrometry
 5. Nuclear Magnetic Resonance Spectroscopy
4. **Microscopy**
 1. Electron microscopy
 2. Atomic force microscopy
 3. Confocal microscopy

List of Practicals:

1. Demonstration and Troubleshooting of centrifuge
2. Separation of Blood components using Centrifuge
3. Hemoglobin separation using Electrophoresis.
4. Design and Development of Virtual Instruments in Lab View.
5. Introduction to Virtual Instrument Designing in Lab View
6. Building Applications using For loops in Lab View
7. Signal Processing using Lab View
8. Analysis of Cerfiximetrihydrate using UV Spectrophotometer.
9. Determination of absorption coefficient using UV-spectrophotometer.
10. Wavelength analysis of different light sources using Atomic Spectrometer.
11. Demonstration and working of High Performance Liquid Chromatography (HPLC)
12. Demonstration and working of Hematology Analyzer.
13. Demonstration and working of Chemistry Analyzer
14. Troubleshooting and repair of Medical Equipment
15. Comprehension of documentation and hospital set-up
16. Open Ended Lab 1 ##### **Recommended Text and Reference Books:**

Medical Devices Regulatory Affairs

Course Outline:

1. **Introduction to regulatory affairs**
 1. The role of RA
 2. Introduction to major global reference regulations and harmonizations
 3. Overview of regulatory environment in major Asian reference countries
 4. Future trends in regulatory development
2. **Pre-market requirements**
 1. Background
 2. Classifications
 3. GMP
 4. Conformity assessment
3. **Advanced products**
 1. Combination products
4. **Medical Device Errors**
 1. Human Factors
 2. Electronic Health Records.
5. **Investigational Device Exemptions**
 1. HDEs
 2. Medical Device 510(k)
 3. Pre-Market Approval (PMA) submissions
 4. **de novo** review and Product Development Protocol
6. **FDA Enforcement**
 1. FDA Postmarket Transformation
 2. Medicare Reimbursement
 3. FDA and the Food and Drug laws. ### **Suggested Teaching Methodology:** Lecturing

(BM-312) - Biostatistics

Course Outline:

1. Descriptive Biostatistics

1. Introduction to Biostatistics,
2. Measures of Central Tendency,
3. Measures of Dispersion,
4. Frequency Distribution,
5. Graphical Methods (scatter plot, histogram, bar chart, stem-leaf plot etc.)

2. Introduction to Probability

1. Multiplication and Addition Laws of Probability,
2. Conditional Probability,
3. Bayes' Rule and Screening Tests, Bayesian Inference

3. Discrete Probability Distributions

1. Expected value and Variance of a Discrete Random Variable,
2. Cumulative-Distribution Function of a Discrete Random Variable, Permutations and Combinations,
3. Binomial Distribution,
4. Poisson Distribution

4. Continuous Probability Distributions

1. Normal Distribution,
2. Properties of the Standard Normal Distribution,
3. Normal Distribution Applications,
4. Estimation of the Mean and Variance of a Distribution

5. Sampling Distributions

1. Central Limit Theorem

6. Hypothesis Testing

1. Hypothesis Testing (z-test t-test (one and two sample),
2. chi-squared test),
3. Analysis of Variance (ANOVA)(one-way & two-way),
4. Regression analysis

7. Statistical Software

1. Make appropriate use of statistical software (STATA, SPSS, MS- EXCEL etc.). ### **Suggested Teaching Methodology:** Lecturing

(BM-313) - Biomaterials

Course Outline:

Theory

1. **Course Overview and Introduction**
 1. Introduction to biomaterials science
 2. Brief history of biomaterials (generations of biomaterials)
 3. Today's biomaterials applications: overview of types of implantable biomaterials and devices
2. **Properties of Biomaterials: General Concepts**
 1. Bonding, interatomic, intermolecular, surface interactions
 2. Introduction to bulk properties: microstructure, strength, deformation, thermal and optical properties
 3. Techniques: Introduction to surface Characterization of Biomaterials
 4. Electron spectroscopy for chemical analysis
 5. Attenuated total internal reflectance Fourier transform-infrared spectroscopy.
 6. Composite biomaterials
 7. 3D structure of biomaterials by bio X-ray diffraction, application of chitosan and other biopolymers in biomedical
3. **Classes of Materials Used in Medicine**
 1. Polymeric biomaterials (chitosan, collagen, elastin, proteoglycan and glycoprotein)
 2. basic principles: molecular and chemical structure, molecular weight and polydispersity
 3. physical behavior
 4. synthesis: addition, free-radical, condensation polymerization
 5. Hydrogels: structure and synthesis
 6. examples of biomedical hydrogels: acrylic, PVA, PEG, degradable, smart hydrogels
 7. Biological materials: structure and properties, hard tissues: tooth and bone, soft tissues: skin, blood vessel, tendon.
4. **Introduction to Mechanical Properties of Biomaterials**
 1. Review of static and dynamic properties: tensile, compressive, flexural, torsional, viscoelasticity, creep, dynamic modulus
 2. Deformation and fracture of engineering materials
 3. Biomechanics of arthroplasty
 4. Introduction to finite element analysis.
5. **Biomaterials Degradation in the Biological Environment**
 1. Review of clinical cases of implant failure
6. Mechanisms of metallic corrosion
7. Fatigue failure
8. Wear
9. Polymer degradation
10. Ceramic degradation
11. **Biocompatibility**
 1. Biological responses to biomaterials
 2. Toxicity and hypersensitivity
 3. Blood-material interactions
 4. Tumours associated with biomaterials and implants
 5. Biofilms
12. **Special Considerations for Implants, Devices and Biomaterials**
 1. Sterility and patient safety
 2. Device Failure Mode Analysis/Risk Analysis
 3. Voluntary consensus standards and regulatory compliance
 4. Legal aspects of biomaterials, clinical trials and case studies in regulations
13. **Tissue Engineering, gene therapy using viral vector materials for scaffolding.**
14. **Biomaterial implantation and Acute inflammation**

15. **Wound healing and the presence of biomaterials**
16. **Immune response to biomaterials**
17. **Biomaterials and thrombosis**
18. **Infection, tumorogenesis and calcification of biomaterials**

List of Practicals:

1. To build molecular model of a biopolymer from basic repeating peptide units
2. Molecular graphics of basic repeating units of biopolymer
3. Interpretation of bio X-ray diffraction of a biomaterial expected diffraction pattern
4. Calculate R-value for structural analysis of biopolymers
5. To build model of CHITOSAN (bio-materials) from basic repeating units.
6. Molecular graphics of basic repeating units of CHITOSAN.
7. Demonstration of features of dental chair & dental operatory.
8. Demonstration of bio-materials (bioceramics, porcelain & metals) its composition & properties
9. Demonstration of the process of sterilization, autoclave & X-ray unit (dental).
10. Separation of bio-material (protein) by electrophoresis method involved in various diseases.
11. Demonstration of different types of sutures.
12. Fabricate a biomaterial for bone tissue
13. Fabricate a biomaterial for dental tissues
14. Tension and compression analysis for fabricated biomaterials.
15. Open ended lab 1
16. Open ended lab 2

(BM-401) - Numerical Methods for Biomedical Engineers

Course Outline:

1. **Error analysis**
 1. Floating points
 2. Errors and types of errors
2. **Solution of non-linear equation**
 1. Bisection,
 2. Regula-Falsi,
 3. Fixed-point iterative and Newton-Raphson's methods.
 4. Solution of linear algebraic equations.
3. **Direct methods**
 1. Crout's and Cholesky methods;
4. **Iterative methods**
 1. Jaccobi's and Guass-Seidal methods.
5. **Eigen values and eigen vectors**
 1. Characteristics equation and Power methods.
6. **Interpolations and extrapolations**
 1. Forward, backward, central difference operators and their relations.
 2. Newtons Forward, Backward and Divided Difference Interpolation Formulae.
 3. Lagrange's and Stirling's Interpolation Formulae.
7. **Numerical differentiation**
 1. Newton's-Forward and Backward differentiation Formulae.
8. **Numerical quadrature**
 1. Trapezoidal, Simpson's one-third, Simpson's three-eight and Weddle's rules and Gaussian quadrature.
9. **Solution of OD Eqns**
 1. Taylor Series, Euler's and its modified,
 2. Runge-Kutta, Milne's,
 3. Adam-Moltan (Predictor-Corrector) methods.
10. **Solution of Higher Order Differential Equations**
 1. Runge-Kutta methods.
 2. Solution of Partial Differential Equations by Finite Differences Methods (Explicit, Implicit and Crank-Nicolson techniques) and ADI Method. ### **Suggested Teaching Methodology:** Lecturing

(BM-404) - Biomechanics

Course Outline:

1. **Introduction**
 1. Definition and perspective
 2. Review of statics
 3. Review of Dynamics
 4. Review of deformable body mechanics
 5. Viscoelasticity, material properties
2. **Anthropometry**
 1. Density, mass and inertial properties
 2. Direct measurement of anthropometric parameters
 3. Muscle anthropometry
 4. Mechanical advantage of muscle
 5. Multipoint muscles,
3. **Kinematics of Human Movement**
 1. Forms of motion
 2. Standard reference systems and joint movement terminology
 3. Spatial reference systems
 4. qualitative vs. quantitative analysis of human movement
 5. limb-segment angles, joint angle, linear and angular velocities and acceleration
 6. tools for direct/indirect measurement of kinematic quantities
4. **The biomechanics of Human Bone Growth and Development**
 1. Composition and Structure of Bone Tissue
 2. Material Constituents
 3. Structural Organization
 4. Types of Bones
 5. Bone Growth and Development
 6. Longitudinal Growth
 7. Circumferential Growth
 8. Adult Bone Development
 9. Bone Response to Stress
 10. Bone Modeling and Remodeling
 11. Bone Hypertrophy
 12. Bone Atrophy
 13. Osteoporosis
5. **Kinetics of Human Movement**
 1. Link segment models
 2. Joint reaction forces
 3. Direct Force measurements
6. **Biomechanics of upper & lower extremity**
 1. Loading and injuries to the shoulder, elbow, wrist joints.
 2. Loading and injuries to the Hip, knee and ankle joints
7. **Gait Biomechanics**
 1. Methods of gait analysis
 2. Gait cycle
 3. Temporal-spatial parameters
 4. Hip, knee and ankle joint kinematics and kinetics
 5. Interpretation of gait data ##### **List of Practicals:**
8. To determine the coordinates of the centre of gravity (COG) of a body using segmentation method.
9. To determine the centre of Gravity Measurement using Reaction Board
10. Volumetric analysis of irregular shaped body segments
11. To determine the muscle force required by the biceps while holding a known weight in hand for a range

- of elbow joint angles using the mechanical arm model
12. To determine the muscle force using an analytical model comprising two muscles at the elbow joint and compare the results with the previous one.
 13. Design and develop a goniometer for upper limb.
 14. Design and develop a goniometer for lower limb.
 15. Design and develop a dynamometer for wrist.
 16. Gait analysis among healthy individuals.
 17. Dynamometry of human foot by virtue of body weight
 18. Volumetric analysis of irregular shaped body segments
 19. Analysis of human motion using Movement Velocity counter
 20. Development of static human model using Visual 3D
 21. Study of blood flow using blood vessel models
 22. To design the human limbs on Solid works.
 23. To analyse the human limbs on ANSYS. ### **Suggested Teaching Methodology:** Lecturing

(BM-408) - Bio-Medical Imaging

Course Outline:

1. **X-ray Imaging**
 1. Physics of X-ray
 2. Imaging with X-ray
 3. Radiation dose
 4. Attenuation based X-ray Imaging
 5. X-ray Detection
 6. X-ray Image Quality
 7. Diagnostic Applications of X-ray Imaging
 8. Demonstration of X-rays Equipment PAGE 101
2. **Principles of Computed Tomography**
 1. Introduction to Computed Tomography and Scanners
3. Attenuation Tomography
4. Time of Flight Tomography
5. Reflection Tomography
6. Diffraction Tomography
7. Formulation of Attenuation Computed Tomography
8. Fourier Slice theorem
 1. **Magnetic Resonance Imaging**
 1. Physical and physiological principle of Magnetic Resonance Imaging
 2. MR Imaging
 3. Formulation of MRI reconstruction
 4. Functional MRI, BOLD MRI,
 5. Applications of MRI and fMRI
 2. **Ultrasound Imaging**
 1. Generation and detection of ultrasound waves
 2. Physical and physiological principles of Ultrasound
 3. Resolution of Ultrasound imaging
 4. Ultrasound Imaging Modalities
 5. Doppler Ultrasound Imaging
 6. Modes of ultrasound image representation
 7. Ultrasound Image Artifacts
 3. **Positron Emission Tomography**
 1. Physical and physiological principles of PET
 2. PET Signal Acquisition
 3. PET Image formation
 4. Significance of PET
 5. Applications of PET ##### **List of Practicals:**
9. Demonstration of X-rays Equipment
10. Demonstration of X-ray Tube components
11. Demonstration of the X-ray collimator, Grids, and Filters
12. Demonstration of Ultrasound Equipment and differentiate between contrast
13. Ultrasound of liver and Gallbladder
14. Ultrasound of spleen
15. Ultrasound of kidney
16. Ultrasound of pancreas
17. Visualization of MRI images
18. Demonstration of CT Scan images of the cerebral aneurysm
19. Demonstration of MRI images of the Brain Tumors and discuss the related issues
20. Demonstration of MRI images of the Knees and discuss the related issues
21. Demonstration of the fluoroscopic images of the blood flow through the arteries

22. Demonstration of the PET Scans
23. To understand the difference between PET and MRI and CT scan

Medical Image Processing

Course Outline:

1. **Digital Image Fundamental**
 1. Image file formats
 2. Elements of Visual Perception
 3. Image Sampling and Quantization
 4. An Introduction to the Mathematical Tools Used in Digital Image Processing
2. **Intensity Transformations and Spatial Filtering**
 1. Basic Intensity Transformation Functions
 2. Histogram Processing
 3. Fundamentals of Spatial Filtering
 4. Smoothing Spatial Filters
 5. Sharpening Spatial Filters
3. **Filtering in the Frequency Domain**
 1. Review of Concept about Fourier in 1D
 2. Fourier Functions of Two Variable
 3. The Basics of Filtering in the Frequency Domain
 4. Image Smoothing Using Frequency Domain Filters
 5. Image Sharpening Using Frequency Domain Filters
4. **Image Restoration and Reconstruction**
 1. Noise Models
 2. Restoration in the Presence of Noise Only-Spatial Filtering
 3. Periodic Noise Reduction by Frequency Domain Filtering
 4. Inverse Filtering, Least Squares Filtering, GM filtering
 5. Image Reconstruction from Projections
5. **Image Segmentation**
 1. Point, Line, and Edge Detection
 2. Thresholding
 3. Region-Based Segmentation
 4. Segmentation Using Morphological Watersheds
 5. The Use of Motion in Segmentation

6. Image Compression

1. Compression Standards
2. Some Basic Compression Methods (Huffman Coding, Golomb Coding) ##### **List of Practicals:**
7. MATLAB: Introduction to MATLAB and image processing toolbox
8. Digital Image Fundamentals: Sampling and quantization, bits per pixel & shades, spatial resolution & image size, Zooming & shrinking images
9. Basic Gray Level transformations: Image Negative, Log transform.
10. Application Of Gamma Correction to enhance image
11. Contrast stretching and thresholding
12. Introduction to image Histogram , Histogram sliding
13. Histogram equalization
14. Enhancement using arithmetic/logic operations
15. Smoothing spatial filters (Mean and Median filters)
16. Sharpening spatial filters (Laplace and Sobel)
17. Un-sharp masking and high-boost filtering Combining Spatial Enhancement methods
18. Review of Fourier transform and convolution theorem, 2D-FT, FT and frequency components of an image
19. Lowpass and Highpass Filters: Ideal filters, Butterworth filters, Gaussian filters. Filters comparison, Unsharp Masking
20. Dilation and erosion
21. Detection of discontinuities, Edge linking and boundary detection, Segmentation by thresholding
22. Object recognition, classification and image compression ### **Suggested Teaching Methodology:** Lecturing

Written Assignments Report Writing ### **Suggested Assessment: Theory (100%)**

Sessional (20%)

Quiz (12%)

Assignment (8%)

Midterm (30%)

Final Term (50%)

Laboratory (100%)

 2. Digital Image Processing by Gonzales, R. C., Prentice Hall, New Jersey.
-

(BM-413) - Biomedical Engineering Project

(BM-423) - Introduction to Robotics

Course Outline:

1. Fundamentals

1. What is a Robot?
2. Classification of Robots.
3. What is Robotics?
4. History of Robotics.
5. Advantages and Disadvantages of Robots.
6. Robot Components.
7. Robot Degrees of Freedom.
8. Robot Joints.
9. Robot Coordinates.
10. Robot Reference Frames.
11. Programming Modes.
12. Robot Characteristics.
13. Robot Workspace.
14. Robot Languages.
15. Robot Applications.
16. Other Robots and Applications.
17. Social Issues.

2. Robot Kinematics

1. Position Analysis.
2. Robots as Mechanisms.
3. Matrix Representation.
4. Homogeneous Transformation Matrices.
5. Representation of Transformations.
6. Inverse of Transformation Matrices.
7. Forward and Inverse Kinematics of Robots.
8. Denavit-Hartenberg Representation of Forward Kinematic Equations of Robots.
9. The Inverse Kinematic Solution of Robots.
10. Inverse Kinematic Programming of Robots.
11. Degeneracy and Dexterity.
12. The Fundamental Problem with the Denavit- Hartenberg Representation.
13. Differential Motions and Velocities.

3. Differential Relationships

1. Jacobian.
2. Differential Motions of a Frame.
3. Interpretation of the Differential Change.
4. Differential Changes between Frames.
5. Differential Motions of a Robot and Its Hand Frame.
6. Calculation of the Jacobian.
7. How to Relate the Jacobian and the Differential Operator.
8. Inverse Jacobian.
9. Design Project.
10. Dynamic Analysis and Forces.

4. Lagrangian Mechanics

1. A Short Overview.
2. Effective Moments of Inertia.
3. Dynamic Equations for Multiple-Degree-of-Freedom Robots.
4. Static Force Analysis of Robots.
5. Transformation of Forces and Moments between Coordinate Frames.
6. Design Project.

5. Trajectory Planning

1. Path vs. Trajectory
2. Joint Space vs. Cartesian-Space.
3. Basics of Trajectory Planning.
4. Joint space trajectory planning,
5. Cartesian space trajectories.

6. Application of Robotic in BME

1. Introduction to medical robotics
2. Mechanisms for medical robots
3. Sensing for medical robots
4. Actuators for medical robots
5. Controls for medical robots
6. Interfaces for medical robots ##### **List of Practicals:**

7. Introduction to the Rhino
8. The Tower of Hanoi
9. Forward Kinematics
10. Inverse Kinematics
11. Image Processing
12. Camera Calibration
13. Object Centroids
14. Camera Calibration
15. Pick and Place 10 Grading

11 Tactile and force sensing 12 Proximity sensing

13. Medical robotics
14. Open ended lab 1
15. Open ended lab 2
16. Open ended lab 3 ### **Suggested Teaching Methodology:** Lecturing

Written Assignments ### **Suggested Assessment: Theory (100%)**

Sessional (20%)

Quiz (12%)

Assignment (8%)

Midterm (30%)

Final Term (50%)

(BM-425) - Telemedicine

Course Outline:

1. Introduction

1. Basics of Information Systems
2. Rudiments of Healthcare Information Management System
3. HIS, Now and future

2. Data standards, Handling and Processing

1. Data representation
2. Storage Tiers
3. Data Structure
4. Flow Charts and Work Process Flow Diagrams
5. Electronic Health Records (HERs)
6. Pros & Cons of Paper medical records
7. Functions and Benefits of EHRs

3. Subsystems of HIS

1. Health Information Systems in Clinical Settings
2. Laboratory Information Systems
3. Radiology Information Systems
4. Clinical Decision Support Systems (CDSS)
5. Healthcare Financial Management.

4. Network and Communication

1. Medical device networking
2. DICOM
3. HL7 standards ### Suggested Teaching Methodology: Lecturing

Written Assignments Report Writing ### Suggested Assessment: Theory (100%)

Sessional (20%)

Quiz (12%)

Assignment (8%)

Midterm (30%)

Final Term (50%) ##### Text and Reference Books: 1. Strategic Information Management in Hospitals: An Introduction to Hospital by Reinhold Haux ISBN:0-378-40356-6 1. Medical Data Management: A Practical Guide ISBN 978-0-387-21773-4

Telemedicine Systems

COURSE LEARNING OUTCOMES:

Upon successful completion of the course, the student will be able to:

Course Outline:

1. Origins and Development of Telemedicine

1. Overview of e-Health, Telehealth and Telemedicine
2. Technological & non-technological drivers
3. Benefits and limitations of telemedicine
4. Telemedicine in developed & underdeveloped nations

2. Technologies of Telemedicine Systems

1. Types of information & transmission
2. Tele-Consultation and Telemonitoring
3. Types of Wireless Networks

4. Communication Protocols, shared variables and network streaming
3. **Telemedicine Applications**
 1. Tele-Radiology
 2. Tele-Dermatology
 3. Tele-Pathology
 4. Tele-cardiology
 5. Tele-Ophthalmology
 6. Tele-Surgery
 7. Tele-psychiatry
 8. Tele-dentistry
 9. Disaster Management
4. **Development and Delivery of Telemedicine Services**
 1. The Strategic Context of Service Development: USA, Australia, the UK and Malaysia
 2. The Evaluation of Pilot Studies
5. **Ethical and Legal Aspects of Telemedicine**
 1. Confidentiality, Patient Rights and Consent
 2. Data Protection and Security
 3. Telemedical Malpractice
 4. Intellectual Property Rights
6. **Future Trends in Healthcare Technology**
 1. Prognostics in Telemedicine
 2. The Aging Population: Home Care for the Elderly
 3. Smart Home Assistive Technologies
 4. Clothing Technology and Healthcare
 5. Haptic Sensing for Practitioners #####
7. To examine the building blocks of LabVIEW application, including the front panel, block diagram, palettes, controls, and indicators
8. To introduce the National Instruments Telemedicine System, DAQ system and develop Virtual Instruments (VIs) in LabVIEW
9. To develop Data flow programming, Structure, Array, Clusters in LabVIEW
10. To acquire physiological data from biomedical sensors to run Vis
11. To apply advance analysis and measurements on acquired bio signals
12. To communicate with VIs across a network using UDP
13. To communicate with VIs across a network using TCP/IP
14. To observe live data streaming using network streams
15. To acquire and analyze electrocardiogram in VIs with Vernier Electrocardiogram Sensor
16. To acquire and analyze muscle activity and fatigue by using Vernier Hand dynamometer.
17. Open ended lab 1
18. Open ended lab 2
19. Open ended lab 3
20. Open ended lab 4
21. Open ended lab 5
22. Open ended lab 7 ##### **Suggested Teaching Methodology:** Lecturing

(BM-432) - Neuroscience and Neural Networks

Course Outline:

1. Introduction to Artificial Intelligence

1. Foundations of AI
2. Agents and Environments.
2. Structure of Agents.
3. Problem Solving Agents.

1. Problem Solving by Searching

1. Searching for Solutions.
2. Uninformed Search Strategies
3. Informed Search Strategies
4. Informed (Heuristic) Search Strategies:
5. Greedy Best-first Search.
6. A* Search.
7. Heuristic Functions.

1. Reasoning and Knowledge Representation

1. Introduction to Reasoning and Knowledge Representation.
2. Propositional Logic.
3. First order Logic.
4. Reasoning with Uncertainty & Probabilistic Reasoning
5. Acting Under Uncertainty.
6. Bayes' Rule.

2. Learning

1. Decision Trees
2. ID3 Algorithm
3. Statistical Learning. ##### **Lab Outline:**

8. Introduction to AI related toolboxes in MATLAB
9. Generating and Processing Undirected and Directed Graphs Using MATLAB.
10. Developing AI agents in MATLAB
11. Develop small Agent networks in MATLAB
12. Breadth First Graph Search Algorithm Using MATLAB
13. Depth First Graph Search Algorithm Using MATLAB
14. A* Heuristic Search Algorithm Using MATLAB.
15. Greedy First Heuristic Search Algorithm Using MATLAB.
16. Min Max Constraint Satisfaction Problems Using MATLAB.
17. Implement of Propositional Logic in MATLAB.
18. Implementation of First order logic in MATLAB.
19. Reasoning with Uncertainty in MATLAB
20. Implementation of Probabilistic Reasoning in MATLAB
21. Implementation of Bayes' Rule in MATLAB
22. Decision Tree Algorithm for using MATLAB
23. Implementing ID3 Algorithm using MATLAB ##### **Suggested Teaching Methodology:** Lecturing

Written Assignments Report Writing ##### **Suggested Assessment: Theory (100%)**

Sessional (20%)

Quiz (12%)

Assignment (8%)

Midterm (30%)

Neuroscience

Course Outline:

1. Introduction to neuroscience

1. Nervous system
2. Sympathetic
3. Parasympathetic and motor nervous system and their functions
4. Brain and its functions
5. Neurons and glia, structure of a neuronal cell, types of glia.
6. Blood brain barriers.

2. Neuronal Circuits

1. Neuronal circuit in emotional control
2. Neuronal circuit in reward and addiction
3. Neuronal regulation of stress

3. Receptors

1. Ionotropic and metabotropic receptors
2. signal transduction pathways
3. G-proteins
4. protein phosphorylation
5. Signaling to the nucleus
6. regulation of gene expression

4. Neurotransmitters

1. Excitatory and inhibitory amino acid neurotransmitters
2. Functions in the brain
3. Pain pathways in brain
4. Role of excitatory neurotransmitter in learning and memory
5. Diseases associated with the malfunctioning of these neurotransmitters
6. Neuronal degeneration

5. Catecholamines

1. Functions in the brain
2. Diseases associated with the malfunctioning.

6. Neural basis of behavioral plasticity

1. Human and animal memory
2. Cellular mechanisms of neural plasticity

7. Neuroendocrine and motivational systems

1. Endocrine systems
2. Feeding behavior
3. Stress

8. Diseases of the nervous system

1. Addiction
2. Depression
3. Schizophrenia
4. Epilepsy
5. Alzheimer
6. Parkinson
7. Prion
8. Motor Neuron Disease ### **Suggested Teaching Methodology:** Lecturing

(BM-451) - Bio-Signal Processing

Course Outline:

1. **Introduction to Digital Signal Processing**
 1. Analog-to-Digital & Digital-to-Analog Conversion
 2. Digital Signals, Systems, and Difference Equations
 3. Realizations of Digital Systems
2. **Time domain Analysis**
 1. Digital Convolution
 2. Auto and Cross Correlation
3. **Discrete System Stability**
 1. The z-Transforms
 2. Transfer function, pole zero plot, and System Stability
4. **Discrete Time Fourier Transform**
 1. Frequency response of discrete system
 2. Frequency spectra of discrete signals
 3. Discrete Fourier Analysis and Periodic Signal Spectrum
 4. Fast Fourier transform (FFT),
5. **Finite Impulse Response Filter Design**
 1. FIR filter design using window method.
6. **Infinite Impulse Response Filter Design**
 1. IIR filter design using Bilinear Transformation Method
 2. IIR filter design using Pole-Zero placement, and Impulse Invariance methods.
7. **Biomedical Applications**
 1. Detection of Events: ECG rhythm analysis, Maternal Interference in Fetal ECG
 2. EEG wave-shape and wave-complexity: Analysis of event related potentials, coherence analysis, detection of EEG rhythms
 3. PPG wave analysis
 4. Sound wave analysis
 5. EMG Processing ##### **List of Practicals:**
8. Impulse and Step Responses
9. Convolution and Correlation
10. Z-transform, Pole-Zero Plot, Stability
11. Frequency response analysis
12. Frequency spectra analysis
13. FIR filter design
14. IIR Filter Design
15. Analysis of Filter behavior
16. Filter simulation
17. PPG Signal Analysis. Signal Peaks. Peak widths. Heart rate. SpO2
18. ECG Waveform Analysis.
19. EEG Processing
20. Feature Extraction from EEG Signals.
21. Sound Processing. Detecting cardiac condition from digital stethoscope
22. Open ended lab 1
23. Open ended lab 2 ##### **Suggested Teaching Methodology:** Lecturing

(BM-452) - Modelling and Simulation for Biomedical Engineers

Course Outline:

1. Introduction

1. What is modeling and simulation
2. Application of Modeling and Simulation in Biomedical Engineering
3. Types of Models e.g. graphical model, Quantitative models,

Multiscale Models

1. Hybrid models and its application in Biomedical Engineering
2. Conceptual modeling, why, when, where to use the conceptual model.
3. Conceptual model of cardiorespiratory system Subdivision of Physiology models and combining of basic elements of Conceptual models.
4. Things necessary before building a model.
5. One block model and its examples e.g. Heart, muscles, eye etc.
6. Hierarchical and integrated Model.

7. Mathematical Models

1. Mathematical Models and their importance in biomedical engineering
2. Mathematical models of Mechanical and Electrical systems.
3. Electrical and fluidic modeling of the blood flow through the artery.
4. Elementary Vascular Model and Its Electrical Analog
5. Electrical modeling of physiological System
6. Electrode electrolyte interface model

8. Application of Modeling and Simulation in Physiological System

1. Modeling of physiological systems
2. Examples of Physiological models
3. Medical imaging and its importance in modeling and Simulation
4. Importance of modeling and simulation according to new trends and technique
5. Modeling of human organs using 3D printing
6. Thermal modeling using Bio heat equations
7. Factors effecting thermal models
8. Application of thermal models on physiological System

9. Software Implementations

1. Implementation of Biomedical models using software. ##### **List of Practicals:**

10. Introduction to modeling using software
11. Design of conceptual model
12. Modeling of cardiovascular system
13. Simulation of Bio heat equation
14. Modeling and simulation of blood flow
15. Modeling and simulation arterial plaque
16. Modeling heat transfer through skin
17. Modeling of electrical stimulation
18. Modeling of human organs
19. Heat simulation using RF coil and high intensity focused ultrasound
20. Modeling through medical images
21. Simulation of light propagation in the eye
22. Glucose and insulin regulation model.
23. Renal clearance modeling using compartmental model
24. Skin Absorption Model using Ficks's Law
25. Open ended lab 1

(CS-107) - Introduction to Computing

Course Outline:

Theory:

1. Introduction

1. Applications of Computers
2. Classification of Computers
3. Advantages and Disadvantages of Computers.
4. Basic Components of a Computing Machine.
5. Input and Output Devices
6. Mass Storage Devices
7. Ports, Buses and Expansion slots.
8. Computer Networking Environment

2. Data Storage

1. Data organization.
2. Data representation in Computers.
3. Physical and Logical Storage.
4. Magnetic Storage Devices viz. RAM, ROM, Secondary Storage, Cache.
5. Optical Storage Devices.

3. Data Processing

1. Data Structures.
2. Flow Charts.
3. Process Flow Diagrams

4. System and Application Programming

1. Basics of Operating Systems.
2. Desktop and Network Operating Systems, Application softwares.

5. Computer Programming

1. Introduction to High Level and Low Level Programming Languages.
2. Process of Compilation and Interpretation.
3. Data Types and Declaration.
4. Header file and Linkage.
5. Preprocessor Directives.
6. Variables and Constants.
7. Basic library functions.
8. Input and Output Statements.
9. Termination, Remarks.
10. Control structures
11. Repetition and loops.
12. Arrays and String Operations
13. Data Filling
14. Using Graphics Libraries in Python/C++.

6. Defining an Engineering Problem

1. Transforming Data in to Information.
2. Using Computers to Solve an Engineering Problem.

7. Semester Project- Group Activity

Practical:

1. Working with Windows 8/10 and DOS.
2. Basic Computer Hardware Awareness and Troubleshooting
3. To begin Programming in Python/C++.
4. Preparing your PC for Python/C++.
5. Understanding Shell and IDLE in Python and/or C++ IDE.

6. Making small programs, do compilation, execution and debugging of programs.
7. Implementation of simple control structures.
8. Using Loops
9. Implementation of functions
10. Using user input and presenting output.
11. Arrays, multidimensional arrays
12. Working with strings, string functions.
13. Data Filling in Python/C++.
14. Using Graphics Libraries in Python/C++.
15. Open Ended Lab I
16. Open Ended Lab II

Teaching Methodology:

- Lecturing, Student Engagement
- Quizzes and Assignments, uploading suggested resources on course website.
- Semester Project
-

Suggested Assessment:

Theory (100%)

Object Oriented Programming

Course Outline

1. Introduction

1. Traditional trends in Programming, viz. procedural and structured programming.
2. Object oriented programming Paradigm.
3. Usefulness of OOP Paradigm.
4. Characteristics of object-oriented languages.

2. Object Oriented Programming Basics

1. Understanding core concepts
2. Classes, Implementation of class and Objects.

3. Objects as physical objects.
4. Encapsulation.
5. Directives
6. Functions and Overloaded Functions
7. Reference arguments
8. Abstraction
9. Polymorphism
10. Object as data types constructor
11. Object as function arguments.
3. **User defined data types, Arrays and String Arrays fundamentals**
 1. User defined data types.
 2. Arrays of objects.
 3. Arrays as class Member Data
 4. Strings and String arrays.
4. **Inheritance**
 1. Concept of inheritance.
 2. Derived classes and Base classes.
 3. Derived Class Constructors.
 4. Member Functions
 5. Class hierarchies.
 6. Public and Private inheritance.
5. **Pointers, Streams and Data Filing**
 1. Addresses and Pointers.
 2. Address of operator and pointer and arrays.
 3. Stream classes.
 4. Stream Errors.
 5. Disk File I/O with streams.
 6. File pointers.
 7. Error handling in I/O file, with member function.
 8. Overloading the extraction and insertion operators.
 9. Memory as a stream object.
 10. Command line arguments, and printer output.
6. **Errors and Exceptions**
 1. A systematic, object-oriented approach to handling errors generated by C++ classes.
 2. Dealing example errors at runtime using Exceptions.
 3. Understanding Exceptional circumstance of Running out of memory
 4. Understanding Exceptional circumstance of Problems opening a file.

List of Practicals:

1. Revision of Loops.
2. Algorithm design based on loops and arrays.
3. Developing small programs using functions.
4. Experimenting operator overloading feature.
5. Developing classes and creating instances of Objects.
6. Developing Inherited classes
7. Designing user defined classes.
8. Experimenting OOP features such as Encapsulation
9. Experimenting OOP features such as Abstraction
10. Experimenting OOP features such as Polymorphism
11. Experimenting OOP features such as Handling runtime errors using Exceptions
12. Experimenting OOP features such as Directives
13. Revision of OOP features
14. Open ended lab I
15. Open ended lab II ##### **Teaching Methodology:** Lecturing, Student Engagement

Quizzes and Assignments, uploading suggested resources on course website.

-

(CS-430) - Microprocessor Programming and Interfacing

Course Outline:

1. **Introduction to Microprocessor and Microcontroller**
 1. Microprocessor and its Architecture
 2. Simplified CPU / Memory Organization
 3. Addressing modes / Instruction Set Summary
 4. I/O port, pin diagram and functions
 5. Data Bus, Address Bus and Control Bus
2. **Using Assembly Language with C/C++**
 1. Introduction to Assembly programming
 2. I/O Programming
 3. Arithmetic and Logical Operations
 4. Program Looping and Subroutine
 5. Serial Port Programming
 6. Interrupts Programming
3. **Data Acquisition Systems**
 1. Analog to digital converters and performance Parameters
 2. Designing of a Data Acquisition Systems
 3. Serial Communication
 4. Synchronous and Asynchronous Communication
4. **Interfacing Microprocessor/Microcontroller**
 1. Memory / Basic I/O interface
 2. RAM / ROM interfacing
 3. Keypad, Seven Segment / LED and LCD display
 4. Serial and Parallel ADC
 5. Sensor Interfacing
 6. Relays and Opto-isolators interfacing
 7. Stepper Motor Interfacing
 8. DC motor interfacing and PWM
5. **Defining an Engineering Problem**
 1. Introduction to embedded system chip board designing
 2. Component selection
 3. Troubleshooting and problem fixing ##### **List of Practicals:**
 6. To demonstrate the hardware of microcontrollers and microprocessor
 7. To use Proteus and Multisim simulating software for simulation
 8. To use Keilmicro vision software for assembly and c programming
 9. To generate List and Hex files
 10. To interface and simulate ports of microcontroller (General)
 11. To interface and simulate LEDs
 12. To interface and simulate seven segments
 13. To interface and simulate monochrome LCD
 14. To program and perform ADC
 15. To program and perform DAC
 16. To connect external memory elements with microcontroller
 17. To program and perform DC motor interfacing and PWM
 18. To program and perform serial communication (RS232)
 19. To program and perform parallel communication (RS232) ### **Suggested Teaching Methodology:** Lecturing

(CY-106) - Chemistry

(EE-214) - Circuit Theory

(EE-493) - Digital Signal Processing

Course Outline:

1. **Signal and System Characteristics and Models**
 1. Concept of Continuous-Time and Discrete-Time Signals and Systems
 2. Basic Operations on Signals
 3. Signal and system classifications
2. **Time-Domain Representation of Continuous-Time Signals**
 1. Sinusoidal and Complex Exponential Signals
 2. Singularity Function Signals
 3. Signal Energy and Power
3. **Time-Domain Analysis of Continuous-Time Systems**
 1. System Impulse Response
 2. Continuous-Convolution Evaluation and Properties
4. **Frequency-Domain Representation of Continuous & Discrete-Time Signals**
 1. Spectra and Bandwidths of Continuous & Discrete Time Signals
 2. Fourier Series Representation of Signals
 3. Amplitude and Phase Spectra of Periodic Signals
 4. The Fourier Transform and Spectra of Aperiodic Signals
 5. Properties of Fourier transform
5. **Frequency-Domain Analysis of Continuous-Discrete Time Systems**
 1. System Frequency Response
 2. Amplitude and Phase Responses
6. **Analysis of Continuous-Time Systems Using the Laplace Transform**
 1. Laplace Transform Evaluations and Theorems
 2. Evaluation of Inverse Laplace Transforms
 3. System Transfer Function and stability
7. **Continuous-Time Filters**
 1. Distortion-less Transmission
 2. Ideal Filters
 3. Approximation of Ideal Filters
 4. Butterworth and Chebyshev Filter Design #####
8. To be familiarize with the MATLAB and SIMULINK.
9. To plot the sinusoidal, exponential and singularity functions
10. To perform the time-shift, time-scaling and time-reversal operations on the signals
11. To compute and plot the impulse response of the system
12. To compute the convolution of LTI Systems
13. To find the Laplace-Transform and inverse Laplace transform of the system
14. To find the transfer function and system stability
15. To plot the signals spectra using Fourier transform
16. To plot the frequency response of the system
17. To design filter using Butterworth & Chebyshev techniques
18. Open ended lab 1
19. Open ended lab 2
20. Open ended lab 3
21. Open ended lab 4
22. Open ended lab 5
23. Open ended lab 6 #####

(EF-305) - Engineering Economic and Management

Course Outline

1. **Introduction to Engineering Management**
 1. Role of Engineer in Management;8
 2. Functions of Management
 3. Planning and Techniques of Management
2. **Organizational Management Engineering**
 1. Organizing Engineering and Structure
 2. Establishment of working relationship
 3. Market for engineering products
 4. Types of Markets
3. **Managerial Decision Making and Management of Operations**
 1. Efficient Managerial Decision in Healthcare setting
 2. Simulation Modeling of Healthcare delivery
 3. Simulation Applications in Healthcare setting
 4. Modeling clinical engineering activities to support healthcare technology management
4. **Management and Supervision**
 1. Principles of Hospital management
 2. Legal, Professional and Ethical Aspects
 3. Resources, duties and functions of medical and paramedical staff
 4. Planning, Knowledge of various Hospital services
5. **Cost and Quality Management**
 1. New Cost Accounting Model
 2. New Indicators for Hospital Management Based on Personnel Cost
 3. Total Quality Management ### **Suggested Teaching Methodology:** Lecturing

PRINCIPLES OF MANAGEMENT

Course Objectives:

This is a rudimentary course for the students of business administration. The focus of attention will be given to learning fundamental principles of management and of managing people and organization in a historical as well as contemporary world. Students are expected to develop analytical and conceptual framework of how people are managed in small, medium and large public and private national and international organizations.

Course Contents:

Introduction, overview and scope of discipline The evolution and emergence of management thought Management functions

Planning concepts, objectives, strategies and policies Decision making

Organizing; departmentalization, line/staff authority, commitments and group decision making

Staffing: principles of selection, performance, career planning Leading: Motivation, leadership, communication

Controlling: the system and process and techniques of controlling Management and Society: future perspective

Text Books:

1. Stephen P. Robins, Mary Coulter: Management
 2. H. Koontz Odonnel and H. Weihrich: Management
 3. Mc Farland: Management: Foundation and Practice
 4. Robert M. Fulmer: The New Management.
-

(FE-119) - Fundamentals of Electrical Engineering

Course Outline:

Theory:

1. **Review**
 1. Structure of Matter, Conductors, Insulators and Semiconductors
 2. Electric Current, Electromotive Force (Voltage), Resistance, Conductance
2. Conventional Current, DC and AC, Real and ideal Sources
3. Ohm's Law
4. Work, Energy and Power, Efficiency
5. **Resistive Network**
 1. Kirchhoff's voltage and current Laws
 2. Voltage and Current Source Conversion
 3. The Voltage-Divider Rule
 4. The Current-Divider Rule
 5. Series and Parallel Connected Sources
 6. Y-Delta Transformations
 7. Balanced Bridges
6. **Network Theorems**
 1. The Superposition Theorem
 2. Maximum Power Transfer Theorem
7. **Capacitance and Capacitors**
 1. The Nature of Capacitance
 2. Capacitor Dimensions and Dielectrics
 3. Capacitor Types
 4. Energy Stored in a Capacitor
 5. Transients in RC Networks
8. **Inductance and Inductors**
 1. Electromagnetic Induction
 2. Lenz's Law, Faraday's Transformer Action, Self-Inductance, Inductor
 3. Energy Stored in an Inductor
 4. Transients in RL Circuits
9. **Poly Phase Systems**
 1. Three phase circuits and balanced loads.
10. **Transformers and AC Machines**
 1. General principle working, fundamental equations, types, efficiency and losses.

Practical:

1. To get familiar with the usage of dual power supply and multimeter.
2. To study the resistor color code and measure the value

of given resistors by the resistor color code chart and also study about the potentiometer.

1. To study the properties of series circuit and also find the calculated value and measured values of the given resistors.
2. To study the properties of parallel circuit and also find the calculated value and measured values of the given resistors.
3. To solve the given combination (series-parallel) circuit and find the values given in the observation table.
4. To study the properties of combination (series-parallel) circuit and also solving the given circuits.
5. To study the properties of combination (series-parallel) circuit and also solving the given circuits.
6. To analyze the given circuit using superposition theorem and find out the value of voltage and current across Resistor.

7. To solve the given circuit using superposition theorem and find out the voltage and current.
8. To determine by analysis the values V_{TH} and R_{TH} in a DC circuit containing a single voltage source.
9. To verify Norton's Theorem and the theory of source Transformation.
10. To study the different switching method.
11. To study the characteristics of the transformer.
12. To perform open circuit and short circuit testing of a transformer
13. To study the characteristics and working principle of DC motor.
14. To study the different Relay switches.

3. College Writing Skills by John Langan. McGraw-Hill Higher Education. 2004.

Professional Practices and Ethics

Course Outline:

1. **Professional Practices**
 1. Overview of professional practices in Biomedical Engineering.
 2. Engineering management in biomedical engineering
 3. Relationship between Professional biomedical engineering Practice and Engineering Management
2. **Engineering Project Lifecycle**
 1. Definition of project
 2. Difference between engineering project and business process
 3. Skills set for a project manager
3. **Management**
 1. Need of managing engineering projects
 2. Scope of Management
 3. Resource and Cost Management
 4. Quality Management
 5. Risk Management
4. **Quality**
 1. Definition of Quality
 2. Quality Vs. Grade
 3. Quality Management Process
 4. Defining SLAs for an engineering project
 5. Performance Reporting

5. Planning

1. Engineering Projects Planning
2. Monitoring and Controlling
3. Cost Estimates and Budget Constraints

6. Professional Ethics

1. Ethical responsibilities of Biomedical Engineers and Moral Complexities.
2. Health-Ethics
3. WHO's Health Policies
4. Codes of law of renowned societies for engineers
5. Code of law of Biomedical engineering society
6. Biomedical Engineers Pakistan code of ethics
7. Ethical challenges for Biomedical Profession. ### **Suggested Teaching Methodology:** Lecturing

Written Assignments Report Writing ### **Suggested Assessment: Theory (100%)**

Sessional (20%)

Quiz (12%)

Assignment (8%)

Functional English

Objectives: To enhance language skills and develop critical thinking ##### **Course Contents:** Basics of Grammar

Parts of speech and use of articles

Sentence structure, Active and passive voice Practice in unified sentence

Analysis of phrase, clause and sentence structure Transitive and intransitive verbs

Punctuation and spelling ##### **Comprehension** Answers to questions on a given text ##### **Discussion** General topics and every day conversation (topics for discussion to be at the discretion of the teacher keeping in view the level of students) ##### **Listening** To be improved by showing documentaries/films carefully selected by subject teachers) ##### **Translation skills** Urdu to English ##### **Paragraph writing** Topics to be chosen at the discretion of the teacher ##### **Presentation skills** Introduction ##### **Note: Extensive reading is required for vocabulary building Recommended books:**

1. Functional English

1) Grammar

1. Practical English Grammar by A.J. Thomson and A.V. Martinet. Exercises 1. Third edition. Oxford University Press. 1997. ISBN 0194313492 PAGE 199

1. Practical English Grammar by A.J. Thomson and A.V. Martinet. Exercises 2. Third edition. Oxford University Press. 1997. ISBN 0194313506

1) Writing

1. Writing. Intermediate by Marie-Christine Boutin, Suzanne Brinand and Francoise Grellet. Oxford Supplementary Skills. Fourth Impression 1993. ISBN 0 19 435405 7 Pages 20-27 and 35-41.

2)

Reading/Comprehension

1. Reading. Upper Intermediate. Brian Tomlinson and Rod Ellis. Oxford Supplementary Skills. Third Impression 1992. ISBN 0 19 453402 2.

3)

Speaking

Communication Skills

Objectives: To enable the students to meet their real life communication needs #### **Course Contents:**
Paragraph writing

Practice in writing a good, unified and coherent paragraph #### **Essay writing** Introduction #####
CV and job application Translation skills

Urdu to English #### **Study skills** Skimming and scanning, intensive and extensive, and speed reading, summary and précis writing and comprehension #### **Academic skills** Letter / memo writing and minutes of the meeting, use of library and internet resources #### **Presentation skills** Personality development (emphasis on content, style and pronunciation) ##### **Note: documentaries to be shown for discussion and review Recommended books:**

Communication Skills

Introduction / Objectives*

The course has been designed as a compulsory subject for the students studying for Bachelor's degree, general or professional. The course is of 3 credit hours carrying 100 marks (recommended). The teaching work is comprised of three dimensions: Historical Perspective (20%); Government and Politics (40%); and Contemporary Pakistan (40%).

The course framework is issue-oriented. It has many dimensions, the historical and ideological background of Pakistan the process of governance and national development as well as the issues arising in the modern, age and posing challenges to Pakistan. The course has been designed with a vision that Pakistan Studies should open a window to future.

Course Outline:

1. Historical Perspective

1. Ideological rationale with special reference to Sir Syed Ahmed Khan, Allama Muhammad Iqbal and Quaid-i-Azam Muhammad Ali Jinnah.
2. Factors leading to Muslim separatism
3. People and Land
 1. Indus Civilization
 2. Muslim advent
 3. Location and Geo-Physical features.

2. Government and Politics in Pakistan

Political and constitutional phases:

- a. 1947-58
- b. 1958-71
- c. 1971-77
- d. 1977-88
- e. 1988-99
- f. 1999 onward

1. Contemporary Pakistan

1. Economic institutions and issues
2. Society and social structure

(HS-200) - Community Service

(HS-202) - Business Communication

Course Outline:

1. **Essay Writing and 7C's of Communication**
 1. Kinds of Essays
 2. Ways to Develop a Proper Beginning, Middle and Ending of Essay
 3. 7C's of Communication
2. **Use of Library and Internet Resources**
 1. Defining "The Library" and "The Internet"
 2. Researching in the library
 3. Researching on the internet
3. **Correction of Sentences and Question Tags**
 1. General rules of correction
 2. Examples
 3. Uses and Forms of Question Tags
 4. Procedure adding a Question Tag
4. **Précis Writing**
 1. Rules for Précis Writing
 2. Examples
5. **Verbal Communication: Strategies and Activities**
 1. Group Discussions
 2. Brainstorming
 3. Interviewing
 4. Creating a Newscast
6. **Paraphrasing**
 1. Introduction
 2. Uses of Paraphrasing
 3. Characteristics of a good Paraphrase
 4. Method of procedure
 5. Specimens
7. **Report Writing**
 1. Importance of Reports;
 2. Guidelines for Informal Report Writing;
 3. Informal Report Writing Practice sessions
8. **Curricula Vitae:**
 1. Introduction
 2. General Format
 3. Types of CV'
 4. Template for CV
 5. Optional Features
 6. Sample CV
9. **Minutes of Meeting**
 1. Introduction
 2. Meeting minutes Format
 3. Common Problems while taking Minutes of a Meeting
 4. Solution of Problems
 5. Sample Minutes of a Meeting
10. **Writing Memorandum**
 1. Introduction
 2. Audience and Purpose
 3. Format
 4. Sample Memo
11. **Resume Writing**

1. What is Resume
2. Kinds of Resume
3. Role of a Resume
12. **Job Application Materials**
 1. Job Application Letter, Acceptance, Follow-up, and Recommendation Letters
 2. Examples and Practice Sessions
 3. Planning the Resume and Letter
13. **Presentations Skills**
 1. Individual & Group Presentation
 2. Teaching Presentation as a Skill
 3. Project Work on Power Point Presentations ### **Suggested Teaching Methodology:** Lecturing Presentations

INTRODUCTION TO SOCIOLOGY 3 Credit Hrs

The Nature of Sociology

0. The study of social life
1. Exploring the global village
2. Sociology as a science
3. The Sociological imagination
4. The development of Sociology
5. Pioneers of Sociology
6. Nature, scope and subject matter of Sociology
7. Brief historical development of Sociology
8. Society and community
9. Relationship with other social sciences
10. Social Interaction Processes Social groups
11. Definition and functions
12. Types of social groups

Social institutions

0. Definition
1. Structure and function of social institutions
2. Inter-relationships among various social institutions Culture and related concepts
3. Definition and aspects of culture
4. Elements of culture
5. Organization of culture
6. Other concepts, cultural relativism, sub cultures, ethnocentrism, culture lag

Socialization and personality

0. Role and status
1. Socialization
2. Culture and personality Deviance and social control
3. Definition and types of deviance
4. Juvenile delinquency
5. Formal and information methods of social control

Social stratification

0. Approach to study social stratification
1. Caste class and race as basics of social stratification

Major perspectives in Sociology

0. Functionalist perspective

(HS-205) - Islamic Studies

Course Outline:

1. **Introduction to Quranic Studies**
 1. Basic Concepts of Quran
 2. History of Quran
 3. Uloom-ul-Quran
2. **Study of Selected Text of Holy Quran**
 1. Verses of Surah Al-Baqra Related to Faith (Verse No-284-286)
 2. Verses of Surah Al-Hujrat Related to Adab Al- Nabi (Verse No-1-18)
 3. Verses of Surah Al-Mumanoon Related to Characteristics of faithful (Verse No-1-11)
 4. Verses of Surah al-Furqan Related to Social Ethics (Verse No.63-77)
 5. Verses of Surah Al-Inam Related to Ihkam (Verse No-152-154)
3. **Study of Selected Text of Holy Quran**
 1. Verses of Surah Al-Ihzab Related to Adab al-Nabi (Verse No. 6,21,40,56,57,58.)
 2. Verses of Surah Al-Hashar (18,19,20) Related to thinking, Day of Judgment
 3. Verses of Surah Al-Saf Related to Tafakar, Tadabar (Verse No-1,14)
4. **Seerat of Holy Prophet (S.A.W) I**
 1. Life of Muhammad Bin Abdullah (Before Prophet Hood)
 2. Life of Holy Prophet (S.A.W) in Makkah
 3. Important Lessons Derived from the life of Holy Prophet in Makkah
5. **Seerat of Holy Prophet (S.A.W) Ii**
 1. Life of Holy Prophet (S.A.W) in Madina
 2. Important Events of Life Holy Prophet in Madina
 3. Important Lessons Derived from the life of Holy Prophet in Madina
6. **Introduction to Sunnah**
 1. Basic Concepts of Hadith
 2. History of Hadith
 3. Kinds of Hadith
 4. Uloom –ul-Hadith
 5. Sunnah & Hadith
 6. Legal Position of Sunnah
7. **Selected Study from Text of Hadith:**
8. **Islamic Law & Jurisprudence**
 1. Basic Concepts of Islamic Law & Jurisprudence
 2. History & Importance of Islamic Law & Jurisprudence
 3. Sources of Islamic Law & Jurisprudence
 4. Nature of Differences in Islamic Law
 5. Islam and Sectarianism
9. **Islamic Culture & Civilization**
 1. Basic Concepts of Islamic Culture & Civilization
 2. Historical Development of Islamic Culture & Civilization
 3. Characteristics of Islamic Culture & Civilization
 4. Islamic Culture & Civilization and Contemporary Issues
10. **Islam & Science**
 1. Basic Concepts of Islam & Science
 2. Contributions of Muslims in the Development of Science
 3. Quran & Science
11. **Islamic Economic System**
 1. Basic Concepts of Islamic Economic System
 2. Means of Distribution of wealth in Islamic Economics
 3. Islamic Concept of Riba
 4. Islamic Ways of Trade & Commerce

12. Political System of Islam

1. Basic Concepts of Islamic Political System
2. Islamic Concept of Sovereignty
3. Basic Institutions of Govt. in Islam

13. Islamic History

1. Period of Khlaft-e-Rashida
2. Period of Ummayyads
3. Period of Abbasids

14. Social System of Islam

1. Basic concepts of Social System of Islam
2. Elements of Family
3. Ethical values of Islam

(HS-219) - Professional Ethics

(For Engineers)

Objectives: The main objective of this course is to apprise potential engineers about social factors that contribute towards enhancing their professional performance for the good of society and the country. This course is culture specific and has to be taught within the context of local and national socio-economic environment. The engineers are expected to supervise several people in different capacities and their understanding about human behaviour is critical for their optimum performance. Modification of human behaviour or getting work done from sub-ordinates and seniors remain a major challenge for all the professional engineers. This course will enhance understanding about the determinants of human behaviour, which ultimately will result in improved individual efficiency.

1. Introduction to Sociology

1. What is sociology?
2. Nature, Scope, and Importance of Sociology
3. Social Interactions
4. Social Groups
5. Social Institutions

2. Culture and Related Concepts

1. Definition of Culture
2. Types of Culture
3. Elements of Culture
4. Role of Culture in Organization
5. Socialization and Personality

3. Interpersonal Relations

1. Interpersonal Behaviour
2. Formation of Personal Attitudes
3. Language and Communication
4. Motivations and Emotions
5. Public Opinion

4. Social Stratification

1. Factors of Social Stratification
2. Caste and class
3. Power, Prestige, and Authority
4. Social Mobility
5. Migration

5. Human Ecology

1. Ecological Processes
2. Ecosystem and energy
3. Ecosystem and Physical Environment
4. Solid Waste Disposal
5. Pollution

6. Population Dynamics

1. World Population Growth and Distribution
2. Population Dynamics in Pakistan
3. Causes and Consequences of Urbanization
4. Population Policy in Pakistan
5. Population and Development

7. Community Development

1. Meaning, Scope, and Subject Matter of Community Development
2. Processes of Community Development
3. Community Development Programs in Pakistan
4. Community Organization and Related Services
5. Cooperation and Conflict in Community Development

SOCIAL ANTHROPOLOGY

(For Engineers)

Objectives: The students are expected to learn anthropological skills for application by professional engineers and other related practitioners. Societal growth needs are to be understood within our own cultural environment. Such a body of applied knowledge will result in improving the professional performance of would-be engineers. As culture and society play an important role towards all human activities, this course will help students relate technical skills to the societal needs and requirements.

1. Introduction

1. Anthropology and Social Anthropology
2. Fields of Anthropology
3. Anthropological Research Methods
4. Social Anthropology and other Social Sciences
5. Significance of Social Anthropology

2. Culture

1. Definition, Properties and Taxonomy
2. Evolution of Growth and Culture
3. Evolution of Man: Religious and Modern Perspectives
4. Evolution of Culture
5. Culture and Personality

3. Evolution and Growth of Culture

1. Evolution of Man
2. Schools of Thought in Cultural Anthropology
3. Acculturation
4. Enculturation
5. Ethnocentrism and Xenocentrism

4. Language and Culture

1. Communication
2. Structural Linguistics
3. Historical Linguistics
4. Relationship between Language and Culture
5. Ethnography

5. Economic System

1. Global Economic System
2. The Allocation of Resources
3. The Conversion of Resources
4. The Distribution of Goods and Services
5. Poverty and Inequality

6. Marriage and Family

1. Marriage and Mate Selection
2. The Family: Types and Functions
3. Kinship System
4. Structure and Function of Family
5. Gender Relations

7. Political Organization

1. Political Sociology
2. Origin of Political Organization and Organizational System
3. Types of Political Organizations
4. Power Politics and Factionalism in Pakistan
5. Resolution of Conflict

8. Religion and Magic

1. The Universality of Religion
2. Comparative Religions
3. Religion and Society
4. Religious Beliefs and Practices
5. Witchcraft and Sorcery

XI Culture Change

1. Forms of Art
2. Expressive Culture
3. Process of Cultural Change
4. Cultural Change in the Modern World
5. Cultural Change in Pakistani society

 1. Discuss financing issues for new ventures
 2. Introduce venture capital investment process
9. **Project Management Skills for Entrepreneurial projects**

10. Project Presentations

Suggested Teaching Methodology:

Lecturing

Guest lectures Project ### **Suggested Assessment: Theory (100%)**

Sessional (20%)

Quiz (12%)

Assignment (8%)

Midterm (30%)

Final Term (50%) ##### **Text and Reference Books:** 1. “Entrepreneurship (5th Edition), Robert D. Hisrich & Michael P. Peters. McGraw-Hill Irwin. Product Design & Development, Karl T Ulrich & Steven D. Eppinger.

1. Case studies and others will be placed with the photocopier and soft copies of presentations will be uploaded on LMS.
2. Technology Ventures (2013 Edition), Richard C. Dorf & Thomas H. Byers.

ENTREPRENEURSHIP

Course Objective:

Entrepreneurship is an important component in the process of economic development. The purpose of this course is to analyse the theories of entrepreneurship and to go for case studies of successful entrepreneurs.

Course Contents:

Introduction: The concept of entrepreneurship, The economist view of entrepreneurship, The sociologist view, Behavioural approach, Entrepreneurship and Management

The Practice of Entrepreneurship: The process of entrepreneurship, Entrepreneurial Management, The entrepreneurial business, Entrepreneurship in service institutions, The new venture

Entrepreneurship and Innovation: The innovation concepts, Importance of innovation for entrepreneurship, Sources of innovative opportunities, The innovation process, Risks involved in innovation

Developing Entrepreneur: Entrepreneurial profile, Trait approach to understanding entrepreneurship, Factors influencing entrepreneurship, The environment, Socio cultural factors, Support systems

Entrepreneurship Organization: Team work, Networking organization, Motivation and compensation, Value system

Entrepreneurship and SMES: Defining SMEs, Scope of SMEs, Entrepreneurial managers of SME, Financial and marketing problems of SMEs

Entrepreneurial Marketing: Framework for developing entrepreneurial marketing, Devising entrepreneurial marketing plan, Entrepreneurial marketing strategies, Product quality and design

Entrepreneurship and Economic Development: Role of entrepreneur in the economic development generation of services, Employment creation and training, Ideas, knowledge and skill development, The Japanese experience

Case Studies of Successful Entrepreneurs Text Books:

1. Paul Burns and Jim Dew Hurst: Small Business and Entrepreneurship
2. P.N. Singh: Entrepreneurship for Economic Growth
3. Peter F. Drucker: Innovation and Entrepreneurship Peter F. Drucker
4. John B. Miner: Entrepreneurial Success

(MT-100) - Introduction To Mathematics (for pre-medical students)

Course Outline:

1. **Algebra**
 1. Complex Numbers
 2. Properties of complex numbers
 3. Conjugates and modulus
 4. Geometrical representation of complex numbers $a + ib$.
2. **Quadratic Equations**
 1. Roots of a quadratic equation (real, distinct, equal and imaginary roots)
 2. Formation of quadratic equation when the roots are given
3. **Cube Root of Unity**
 1. Properties of cube root of unity;
4. **Matrices**
 1. Properties, sum, difference and multiplication of matrices
 2. Cramer's rule
 3. Solution of linear equations of three unknowns
5. **Determinants**
 1. Properties: addition, subtraction and multiplication of determinants
 2. Sequence and series
 3. Arithmetic progression
 4. Standard forms of an A. P.
 5. Arithmetic means
 6. Geometric progression
 7. Standard forms of a G. P.,
 8. Sum of Infinite geometric series
 9. Geometric means
 10. Harmonic progression
 11. Harmonic means
 12. Relation between H.M., A.M. and G.M.
6. **Binomial Expansion**
 1. Expansion of type $(a+b)^n$ for positive integer of 'n'
 2. Use of the general term and determine the middle term or terms of the expansion.
7. **Partial Fractions**
 1. Resolve into partial fractions
 2. Proper and improper fraction
8. **Functions:**
 1. One-one function
 2. Onto function
 3. Even function
 4. Odd function
 5. Exponential function
 6. Trigonometric function
 7. Logarithmic function
9. **Circular Measure**
 1. Understand the definition of radians and use the relationship between radians and degrees.
10. **Trigonometric Functions**
 1. Basic functions e.g. sine, cosine, tangent etc. relation between them
 2. Trigonometric identities, sum and difference formulae, multiple angle formulae
 3. Express type $a(\sin\theta) + b(\cos\theta)$ into $R\sin(\theta + -\varphi)$ etc.
 4. Inverse functions
11. **Differential Calculus**

1. Limits: Basic concepts
2. Limit of form $(\sin\theta)/\theta = 1$; when θ tends to zero.
3. Exponent functions and type a^x etc.
12. **Differentiation**
 1. Differentiation of χ^n product and quotient formula
 2. Trigonometric, exponents and logarithmic functions
 3. Differentiation of implicit function, parametric function
 4. Higher order Derivatives
 5. Applications of differentiations
 6. Minima and maxima
 7. Tangent and normal velocity and acceleration
 8. Rate of reaction
13. **Integral Calculus**
 1. Basic Integration
 2. Integrals of sum of powers of ' χ '
 3. Trigonometric, exponent and logarithmic functions
 4. Integration by parts: e.g $\chi \sin\chi, \chi e^\chi$ and $\log\chi$ etc.
 5. Substitution method
14. **Coordinate Geometry**
 1. Lines
 2. Find length, mid-point, gradient of line segment, given the coordinates of end points
 3. Different forms of equation of a line
 4. Angle between two lines, distance of a point from a line

Teaching Methodology:

Lecturing

Written Assignments Report Writing ### **Suggested Assessment: Theory (100%)**

Sessional (20%)

Quiz (12%)

Assignment (8%)

Midterm (30%)

Final Term (50%) ##### **Text and Reference Books:** 1. FSC Maths Part I /II

(MT-114) - Calculus

Course Outline:

1. Limits and Continuity

1. Introduction to Limits
2. Rates of Change and Limits
3. One-Sided Limits, Infinite Limits
4. Continuity, Continuity at a Point, Continuity on an interval

2. Differentiation

1. Definition and Examples
2. Relation Between Differentiability and Continuity
3. Derivative as slope, as rate of change (graphical representation).
4. The Chain Rule
5. Applications of Ordinary Derivatives

3. Integration

1. Indefinite Integrals
2. Different Techniques for Integration
3. Definite Integrals
4. Riemann Sum, Fundamental Theorem of Calculus
5. Area Under the Graph of a Nonnegative Function
6. Improper Integrals

4. Transcendental Functions

1. Inverse functions
2. Logarithmic and Exponential Functions
3. Inverse Trigonometric Functions
4. Hyperbolic Functions and Inverse Hyperbolic Functions
5. More Techniques of Integration

5. Analytical Geometry

1. Three Dimensional Geometry
2. Vectors in Spaces
3. Vector Calculus
4. Directional Derivatives
5. Divergence, Curl of a Vector Field
6. Multivariable Functions
7. Partial Derivatives

6. Analytical Geometry

1. Conic Sections
2. Parameterizations of Plane Curves
3. Vectors in Plane, Vectors in space
4. Dot Products, Cross Products
5. Lines and Planes in Space
6. Spherical, Polar and Cylindrical Coordinates.
7. Vector-Valued Functions and Space Curves
8. Arc-Length and Tangent Vector
9. Curvature, Torsion and TNB Frame
10. Fubini's Theorem for Calculating Double Integrals
11. Areas Moments and Centers of Mass
12. Triple Integrals, Volume of a Region in Space

Suggested Teaching Methodology: Lecturing

Written Assignments Report Writing ### Suggested Assessment: Theory (100%)

Sessional (20%)

Quiz (12%)

Assignment (8%)

Midterm (30%)

Final Term (50%) ##### **Text and Reference Books:** 1. Advanced Engineering Mathematics, by Erwin Kreyszig, 8th Edition 1. Calculus And Analytical Geometry, Schaum's Series

(BM-223) - Differential Equations and Fourier Series

Course Outline:

1. The complex number and complex variables

1. Complex differentiation and integration
2. Laplace Transformation and its applications
3. Series solution of the DEs
4. Complex number systems and Complex Variable theory
5. Introduction to complex number systems
6. Argands diagram, modulus and argument of a complex number
7. Polar form of a complex number
8. De Moivres theorem and its applications
9. Complex functions, analytical function, harmonic and conjugate harmonic functions
10. Cauchy-Riemann equations (in Cartesian and polar coordinates).
11. Line integral
12. Greens theorem
13. Cauchys theorem
14. Cauchys integral formula
15. Singularities, poles, residue and contour integration and application

2. Laplace Transforms

1. Laplace transforms of elementary functions
2. Properties of Laplace transform
3. Laplace transform of derivatives, integrals
4. Multiplication by t and division by t properties
5. Periodic functions and their Laplace transforms
6. Inverse Laplace transforms and their properties
7. Convolution theorem
8. Inverse Laplace transforms by integral and partial fraction methods
9. Heaviside expansion formula
10. Solution of ordinary differential equations by Laplace transform
11. Applications of Laplace transformation on various fields of engineering

3. Series Solution of Differential Equations

1. Introduction
2. Validity of series solution
3. Ordinary point, singular point
4. Forbenius method
5. Indicial equation
6. Bessels differential equation, its solution of first kind and its recurrence formulae
7. Logendre differential equation and its solution
8. Rodriguez formula

4. Fourier Transform

1. Fourier transform of simple functions
2. Magnitude and phase spectra
3. Fourier transform theorems
4. Inverse Fourier transform
5. Solution of differential equation using Fourier transform ### **Suggested Teaching Method-ology:** Lecturing

Written Assignments Report Writing ### **Suggested Assessment: Theory (100%)**

Sessional (20%)

Quiz (12%)

Assignment (8%)

Midterm (30%)

Final Term (50%)

(MT-272) - Linear Algebra And Geometry

Course Outline:

1. Linear Algebra

1. Methods for solution of algebraic linear equations

2. Vectors

1. Scalar and vector quantities
2. Differentiation and integration of vector functions
3. Gradient, Divergence and Curl
4. Line integrals
5. Green's Theorem
6. Gauss theorem
7. Divergence theorem
8. Stokes' theorem

3. Ordinary Differential Equations

1. Formulations
2. Order, degree and linearity of differential equations
3. Complementary and particular solutions, initial and boundary value problems
4. Solution of Ordinary Linear Differential Equations of First Order
5. Methods of solutions, Bernoulli's differential equations

4. Linear Second Order Differential Equations

1. Characteristic equation and different types of it
2. Methods of solving homogeneous linear differential equations with constant coefficients
3. Particular solution by variation of parameter's method and solution by indeterminate coefficient method ### **Suggested Teaching Methodology:** Lecturing

-

(BM-115) - Physics

Course Outline:

Theory:

1. Properties of Matter

1. Elasticity and modulus of Elasticity
2. Experimental determination of young's modulus
3. Bending of beams
4. Cantilever.

2. Fluids

1. Steady and turbulent flow
2. Bernoulli's theorem, Viscosity
3. determination of Coefficient of viscosity by Poiseuille's method
4. Surface tension
5. Surface energy
6. Angle of contact
7. Determination surface tension by rise in a capillary tube.

3. Heat & Thermodynamics

1. Heat, Temperature, and Theories of heat
2. Adiabatic and isothermal processes
3. The four laws of thermodynamics
4. Thermodynamic functions
5. Efficiency of Heat Engines
6. Carnot's Cycle
7. Entropy
8. Reversible Process and cycles
9. Thermodynamic equilibrium
10. Introduction to Heat transfer Mechanisms.

4. Optics

1. Waves and Oscillations
2. Simple Harmonic Motion
3. types of wave motion
4. Optics of light
5. Interference
6. Diffraction
7. Polarization
8. Double refraction
9. Dispersion
10. Types and uses of Deviation Lasers

5. Electricity and Magnetism

1. Electric charges
2. Electric field
3. Electric potential
4. Coulomb's law
5. Gauss's law
6. Capacitors and dielectrics
7. Electric current
8. Ohm's Law
9. Magnetic properties of matter
10. Magnetic field
11. Magnetic force on current
12. Ampere's law, Faraday's law, and Lenz's law

6. Sound

1. Hearing and Echolocation
2. Ultrasound

Practical:

1. Study of Hook's Law
 2. Measuring stress, strain and Young's Modulus of different materials
 3. Study of Surface Tension and Viscosity of liquids
 4. Study of Boiling points of liquids
 5. Study of Gas laws
 6. Venturi effect of liquids in motion
 7. Heat transfer and entropy
 8. Study of light, Color addition, Refraction and Prism
 9. Measurement of Snell's Law
 10. Convex and Concave Lens
 11. Study of reversibility and Dispersion of Light
 12. Focal point and Magnification of Thin lens
 13. Focal point and Magnification of Concave Mirror
 14. Telescope and Microscope
 15. Calculation of speed of Sound
 16. Project : Construction of Telescope./Microscope

(TC-201) - Digital Logic Design

Course Outline:

1. **Number Systems**
 1. Introduction to Digital Electronics, Why Binary Numbers?
 2. Binary to Decimal Conversion, Decimal to Binary Conversion,
 3. Hexadecimal Numbers, Hexadecimal to Binary Conversion,
 4. Decimal to Binary Conversion,
 5. BCD Numbers, The ASCII Code
2. **Logic Gates**
 1. Boolean operations such as NOT, OR, AND, XOR, NOR, NAND, XNOR
 2. Boolean algebra, DeMorgan's theorems, Two's complement of a binary number
3. **Simplification of Boolean Function**
 1. The Map Method such as Two and Three Variable Maps, Four Variable Map
 2. Product of Sums simplification
 3. NAND and NOR implementation
 4. Don't Care Conditions
 5. The Tabulation Method
4. **Combinational Logic**
 1. Design Procedure
 2. Adders, Subtractors
 3. Code Conversion
 4. Analysis Procedure
5. **MSI and PLD Components**
 1. Decimal Adders
 2. Decoders and Encoders
 3. Multiplexers
 4. Read Only Memory
 5. Programmable Logic Array (PLA)
 6. Programmable Array Logic (PAL)
6. **Synchronous Sequential Logic**
 1. Flip-Flops, latches
 2. Triggering of Flip-Flops
 3. Analysis of Clocked Sequential Circuits
 4. State Reduction and Assignment
 5. Design Procedure
7. **Registers, Counters and the Memory Unit**
 1. Registers
 2. Shift Registers
 3. Ripple Counters
 4. Synchronous Counters
 5. Timing Sequences
 6. Random Access Memory (RAM)
 7. Memory Decoding
8. **Displays**
 1. Seven-segment Displays,
 2. Common Anode Display,
 3. Common Cathode Display,
 4. Seven-Segment Display Driver,
 5. Dot Matrix Displays,
 6. LED and LCD displays, Drivers for displays
9. **Introduction to Microprocessors**

List of Practicals:

1. Digital Logic Gates
2. Simplification of Boolean Functions
3. Combinational Circuits
4. Code Converters
5. Design with Multiplexers
6. Adders and Subtractors
7. Flip Flops
8. Sequential Circuits
9. Counters
10. Shift Registers
11. Serial Addition
12. Memory Unit
13. Clock Pulse Generator
14. Parallel Adder
15. Binary Multiplier
16. Asynchronous Sequential Circuits ### **Suggested Teaching Methodology:** Lecturing
